

# Buildr HowTos

## Buildr Examples.

If you are interested in seeing some Example-Code, you can clone [Buildr-Examples](#) from GitHub.

Or take a look at [buildr-examples](#) for more examples (antwrap, textile2pdf, p2site, PDEtests).

## How to get things done with Buildr.

- [How to apply all profile properties](#)
- [How to build an IzPack installer](#)
- [How to call Ant scripts](#)
- [Howto configure Eclipse EGit plugin with sub-projects](#)
- [How to create a classpath](#)
- [How to create and use an extension \(working example FOR REAL!\)](#)
- [How to create a non-existent pom](#)
- [Howto create Eclipse .launch configurations](#)
- [How to depend on a war-packaged project](#)
- [How to exclude dependencies from transitive\(\)](#)
- [How to explode a .war file](#)
- [How to generate sources before compilation](#)
- [How to include dependencies in .jar packages](#)
- [How to integrate a XDOCLET task](#)
- [How to integrate JRuby's Warbler into Builder](#)
- [How to keep profiles.yml DRY](#)
- [How to modify a package after buildr has created it](#)
- [How to package sources .zip](#)
- [How to reuse another project's test classes](#)
- [How to run buildr using nailgun](#)
- [How to run jetty](#)
- [How to upload signed artifacts with GPG](#)
- [How to use .jar files stored inside a .zip file](#)
- [How to use Atlassian Bamboo](#)
- [How to use JRuby + Nailgun + Buildr](#)
- [How to use local .jar files for compilation](#)
- [Run the Eclipse \(ecj\) compiler](#)
