

SunOne 7.0

To use SunOne with the framework, you will need to grant the appropriate permissions. You can simply grant all permissions, or just the specific permissions the framework needs.

Granting All Permissions

```
grant {  
    permission java.security.AllPermission;  
};
```

Granting Specific Permissions

- Grant Write Permissions to `java.util.PropertyPermission`
- Add `java.lang.reflect.ReflectPermission "suppressAccessChecks"`
- Grant all permissions to `OgnlInvokePermission`

```
grant {  
    permission java.util.PropertyPermission "*", "read, write";  
    permission java.lang.reflect.ReflectPermission "suppressAccessChecks";  
    permission ognl.OgnlInvokePermission "*";  
};
```
