

Hackathon to Construct a Solution Mix using Open Identity Ecosystem Components

Event

ApacheCon Core Europe
Submission Type Presentation
Category Developer
Status New

Abstract

The Open Identity Ecosystem is a collection of organizations, individuals and customers who align to form a marketplace. The goal is to promote adoption of common security practices using open source IAM components. This hackathon is the first working session of members to build a solution mix. Possible targets for inclusion are Apache Directory Fortress, Apache Syncope, Midpoint, CAS, Shib, OpenLDAP, etc... The objective is create a meta product, or stack, that combines the identity components into a deployable unit. Along the way, changes to contributing projects will be pushed into their respective code repos.

Audience

This is a working group that targets individuals who are members of the Open Source Identity Ecosystem. This includes members from Apache projects like Directory and Syncope along with those from outside projects. Those from the Apache community are welcome to join in.

Experience Level

Advanced

Benefits to the Ecosystem

This will be a first attempt to actually assemble a solution mix using Open Identity Ecosystem core products. If successful it will pave the way to make things easier for those using open source security software in the future.

Technical Requirements

Knowledge of any of the open source identity projects on the market targeted for inclusion into the solution mix.
