

# example scenario

Run the examples/wsn-http-binding example per the README.txt.

In this simple scenario an HttpProducer produces notification messages, and an HttpConsumer receives notification messages. Both HttpProducer and HttpConsumer will interact with ServiceMix via the HTTP endpoints exposed in the standard example configuration.

The sequence consists of 4 primary messages: 1) createPullPoint, 2) subscribe (pullPoint), 3) notify and 4) getMessages. The following high level sequence diagram captures some important interactions:

The SOAP messages are as follows:

1) createPullPoint

```
<!--
   Sample CreatePullPoint request sent to http://localhost:8192/CreatePullPoint/
-->
<env:Envelope xmlns:env="http://schemas.xmlsoap.org/soap/envelope/">
  <env:Header />
  <env:Body>
    <wsnt:CreatePullPoint xmlns:wsnt="http://docs.oasis-open.org/wsn/b-2" />
  </env:Body>
</env:Envelope>
```

```

<env:Envelope xmlns:env="http://schemas.xmlsoap.org/soap/envelope/">
    <env:Body>
        <ns4:CreatePullPointResponse
            xmlns:ns2="http://www.w3.org/2005/08/addressing"
            xmlns:ns4="http://docs.oasis-open.org/wsn/b-2"
            xmlns:ns3="http://docs.oasis-open.org/wsrf/bf-2"
            xmlns:ns5="http://docs.oasis-open.org/wsn/t-1">
            <ns4:PullPoint>

                </ns2:Address>
            </ns4:PullPoint>
        </ns4:CreatePullPointResponse>
    </env:Body>
</env:Envelope>

## 2) subscribe (pullPoint)

#### Notes:

- requests must include URL trailing slash (<http://localhost:8192/Broker/>) due to smx bug
- pay special attention to the WS-Addressing syntax
- all requests are directed at the /Broker/ endpoint, except the createPullPoint
- only SimpleTopic expressions appear to be supported at this time
