

Internationalization

Internationalization

OFBiz is used all over the world by people of different languages and cultures - due to its strong support of internationalization. That support is achieved by:

- Keeping the text that appears in the user interface in "label files" that contain text translations.
- Using the [ICU4J](#) library.

Developers should take the time to read Sun's [Java Internationalization Website](#) and the [ICU4J Website](#).

General guidelines for OFBiz internationalization can be found here:
