

# Home

VMBuild houses an installation of [Continuum](#) and [Archiva](#) for ASF projects.

The service runs at <http://vmbuild.apache.org/continuum> and <http://vmbuild.apache.org/archiva> respectively on the VMBuild virtual machine.

## Objectives

- To effectively build regular development snapshots and/or nightly builds
- To copy those builds to a location more suitable for limited distribution, if required
- To assist projects with their Continuous Integration and release needs.

## Overview

- [Current volunteers and administrators](#)
- [Monitoring](#)
- [Installed Software](#)
- [Dependencies](#)
- [Ant Nightly Build Account](#)

## Administration Guides

- [Managing Continuum](#)
- [Managing Archiva](#)
- [Managing httpd](#)
- [VMBuild Unix Account Administration](#)
- [Current Open Issues](#)
- [Scheduling a blackout](#) (useful if there is a scheduled or extended outage on [svn.apache.org](http://svn.apache.org))
