

Index

This is the home page for the Apache Ivy wiki.

This is not the official Ivy web site, which is available here: <http://ant.apache.org/ivy/>

This wiki is used to share community knowledge about Ivy. Feel free to contribute! If you wish to contribute, please create a user profile and log in. Unfortunately we've been receiving more spam than we can handle so after you have created your profile you need to ask on either the Ivy user or Ant dev list once and your profile will be granted the right to edit existing or create new pages.

WARNING: As content found here is contributed by users, do not trust everything you find here. The only official documentation can be found at <http://ant.apache.org/ivy/> and downloaded with each Ivy release.

Nevertheless, as content found here is contributed by users, it covers aspects of Ivy which are not covered by the official documentation, and is a very good source of information.

Available pages :

Committer space

- [Notes on the updatesite deployment](#)
- [Releasing IvyDE](#)

Ivy internals

- [Generate EAR deployment descriptor from Ivy resolution report](#)
- [Ivy Data Model](#)
