

IIoT analytics made easy with Apache StreamPipes

Dominik Riemer | PPMC Apache StreamPipes

IIoT Track | Oct 03, 2022

This talk

Project Overview

Walkthrough

Feature Tour

Connect industrial data

Visually explore data

Create pipelines

Use data in external systems

Extend StreamPipes

Future Work / How to contribute

Dominik

About me

- from Karlsruhe, Germany
- Open Source Enthusiast
 - Co-initiator & PPMC member @StreamPipes
 - Committer @PLC4X
- currently co-founder & CEO of Bytefabrik.AI
- previously research division manager @FZI

Project Overview

Apache StreamPipes (incubating)

Mission Statement

"An open source industrial IoT toolbox to enable non-technical users to **connect**, **analyze** and **exploit** (IoT) data streams."

Connect

Pipeline Editor

Dashboard

Data Explorer

Notifications

Apache StreamPipes

Project facts

originally created by FZI Research
Center for Information Technology, first
presented at ACNA19

Incubating project since December
2019

4.5 Apache releases
(release 0.70. under vote)

13 PPMC members

7 committers

Apache StreamPipes

Integration with other ASF projects

Connectivity

Connectors

Visualizations

Apache StreamPipes

What's new in release 0.70.0?

Improved Data Explorer

Management of assets and resources

Export/Import of StreamPipes resources

Event preview in StreamPipes Connect

> 50 bug fixes and improvements

Walkthrough

Apache StreamPipes

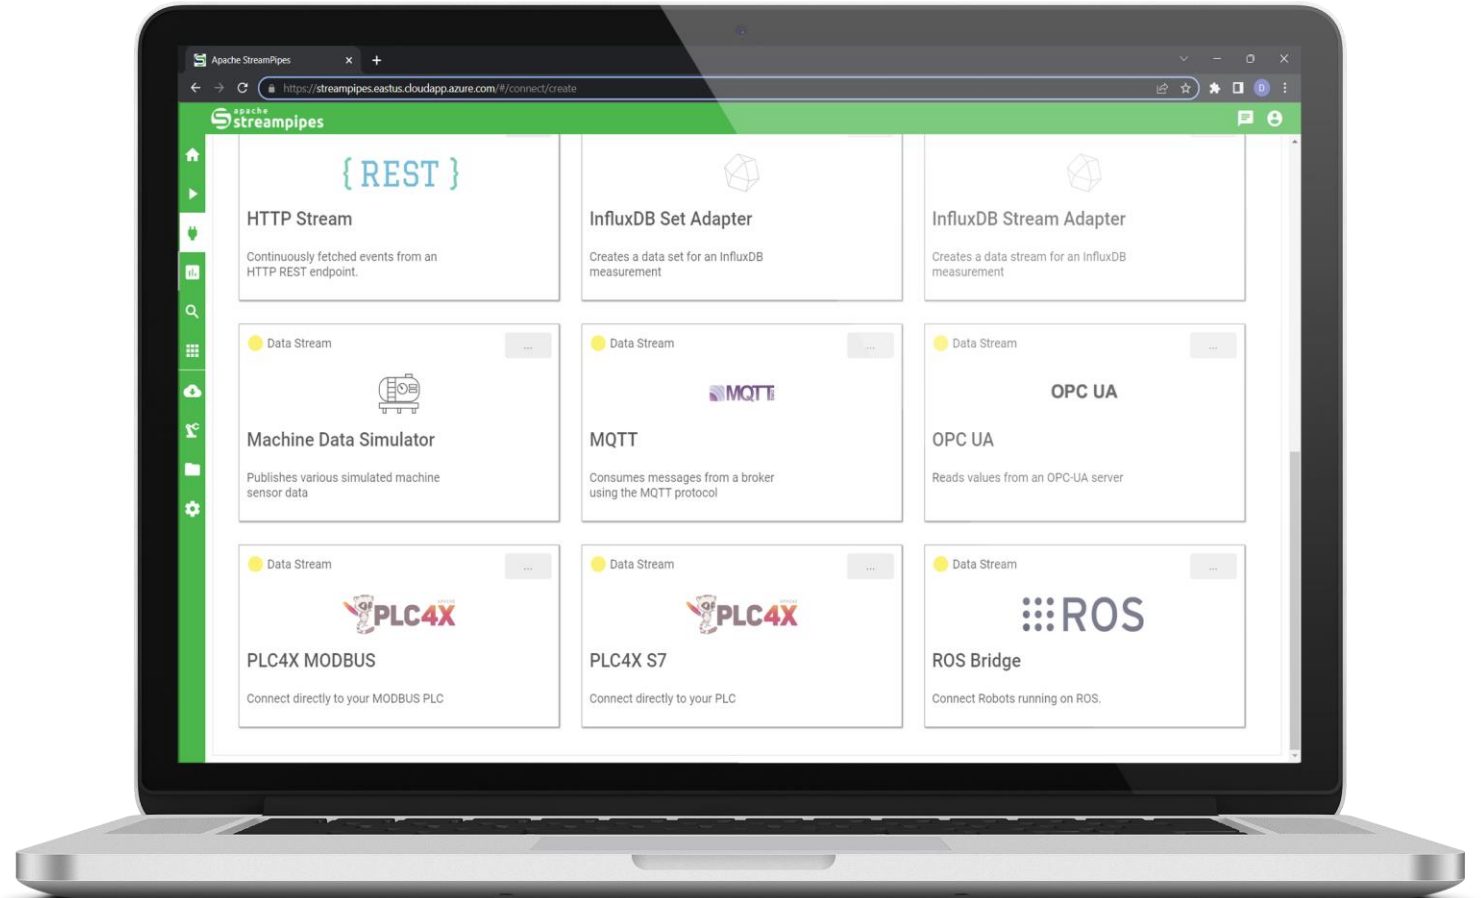

Connect

Stream/Set adapter library

Pre-processing rules

Schema configuration

Apache StreamPipes

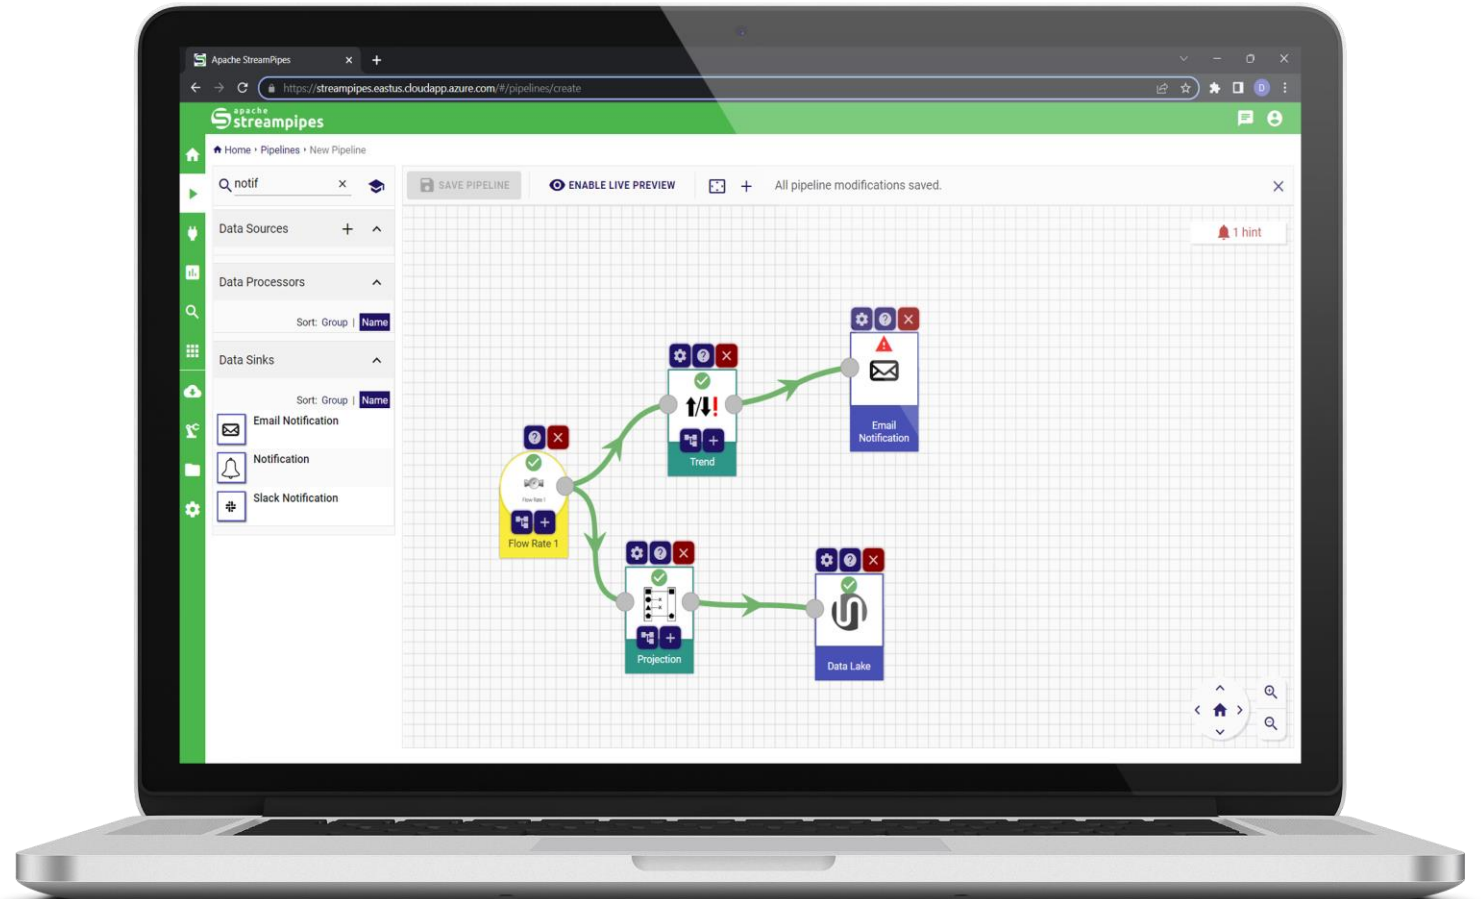

Pipeline Editor

Flexible toolbox for data
harmonization & analytics

From thresholds to AI models

> 100 algorithms and SDK for
extensions

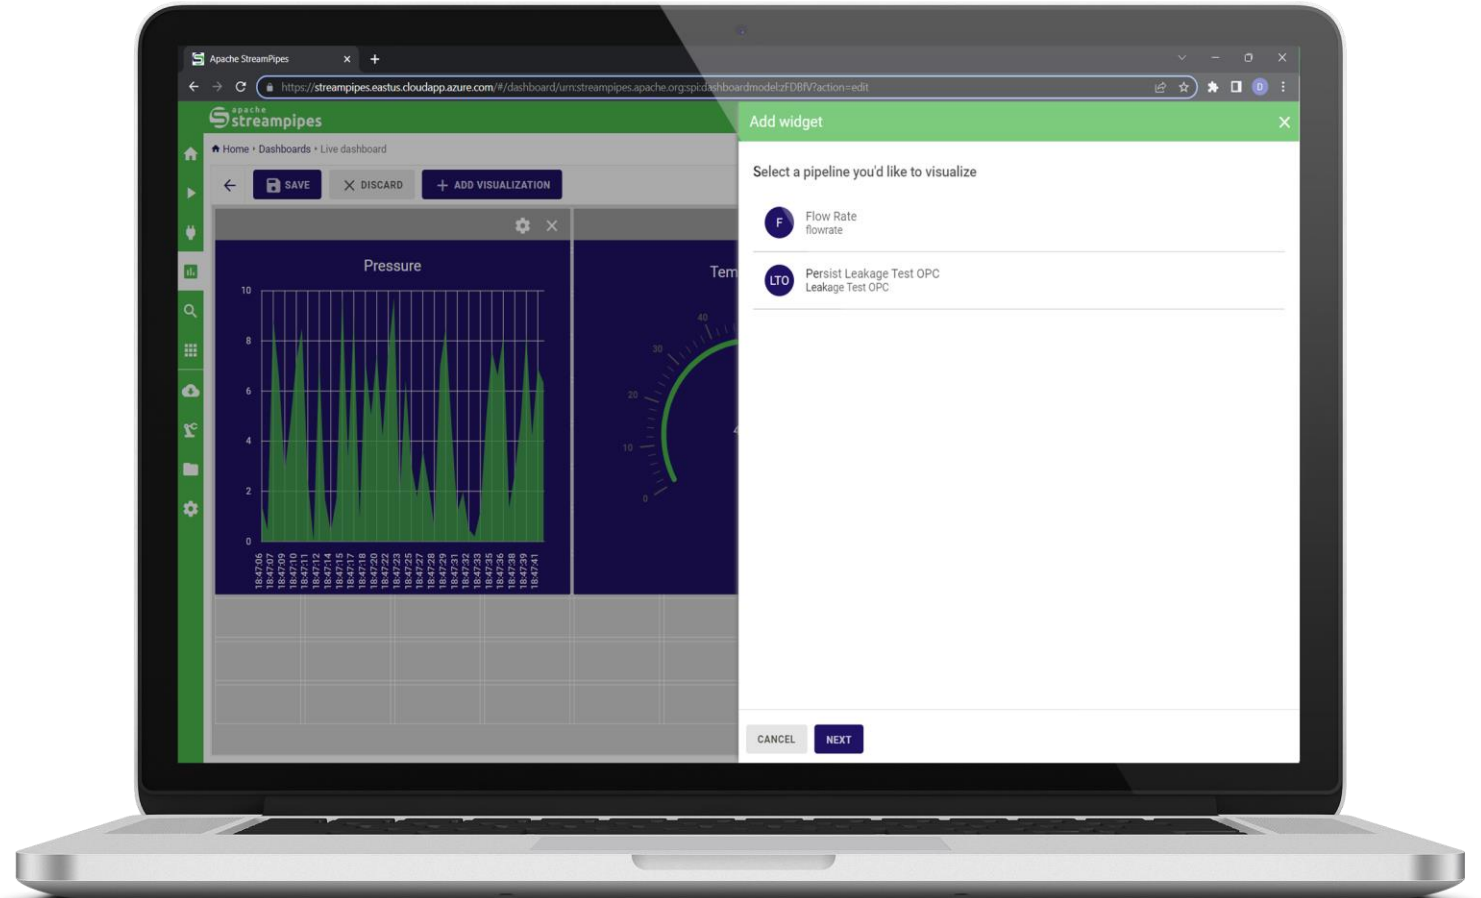

Apache StreamPipes

Live Dashboard

Visualization of live metrics & KPIs

Widgets and easy configuration

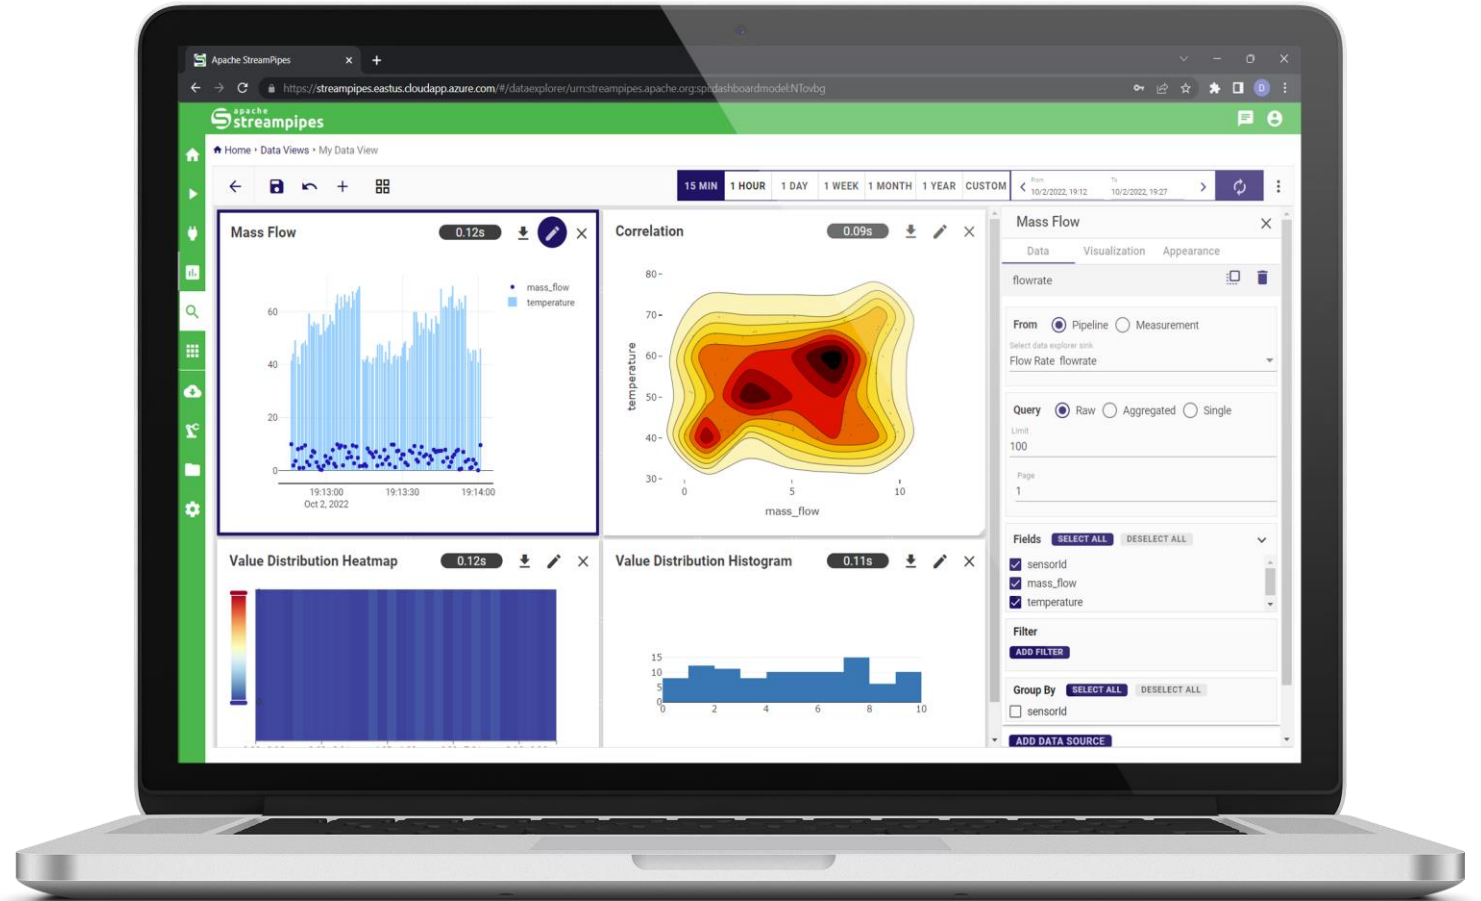

Apache StreamPipes

Data Explorer

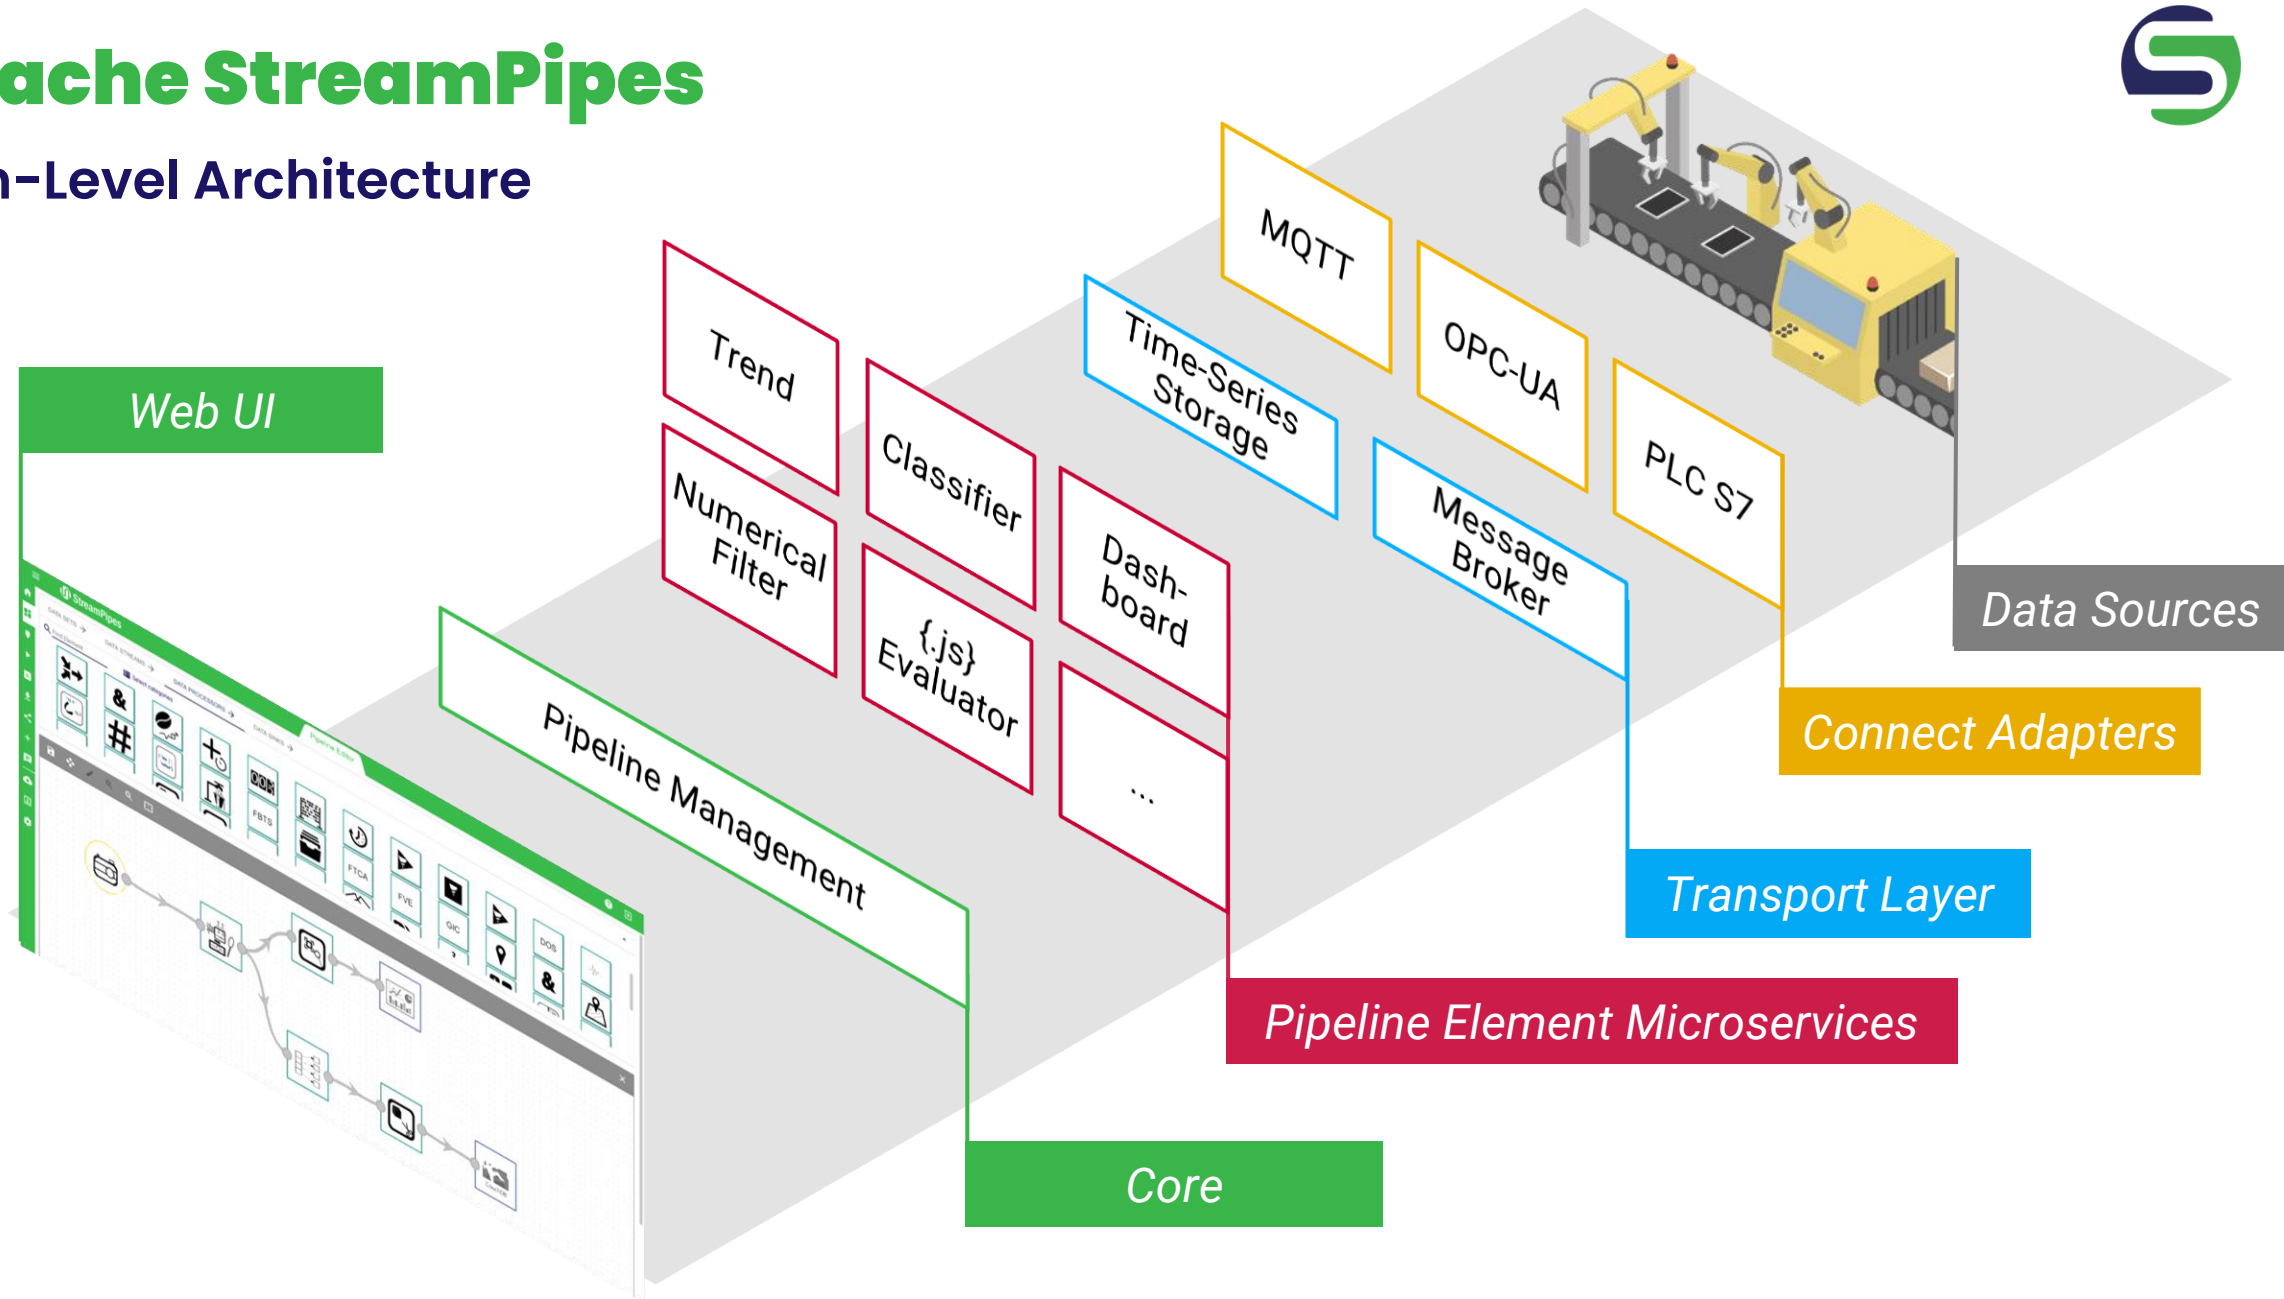

„Visual Analytics“

Quickly explore data and find correlations

Apache StreamPipes

High-Level Architecture

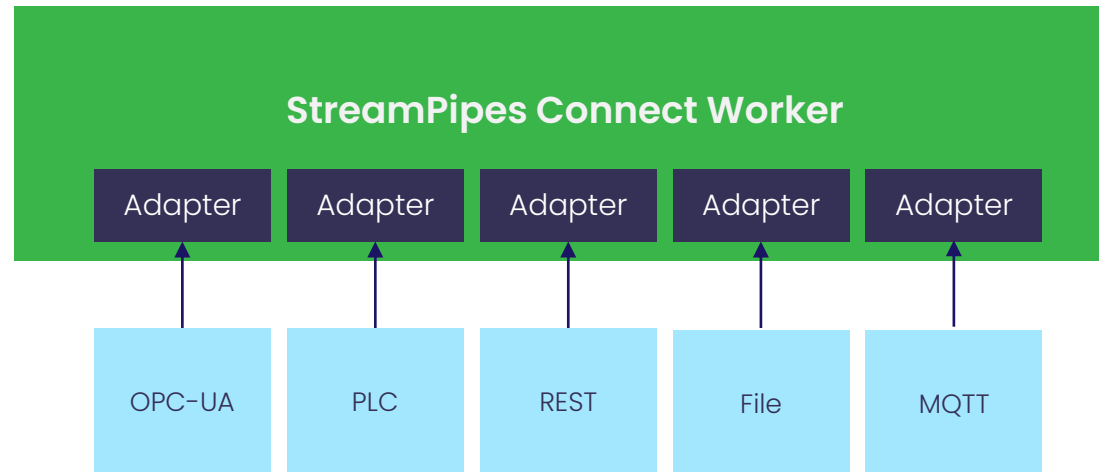

Connect industrial data sources

Connect data

Architecture

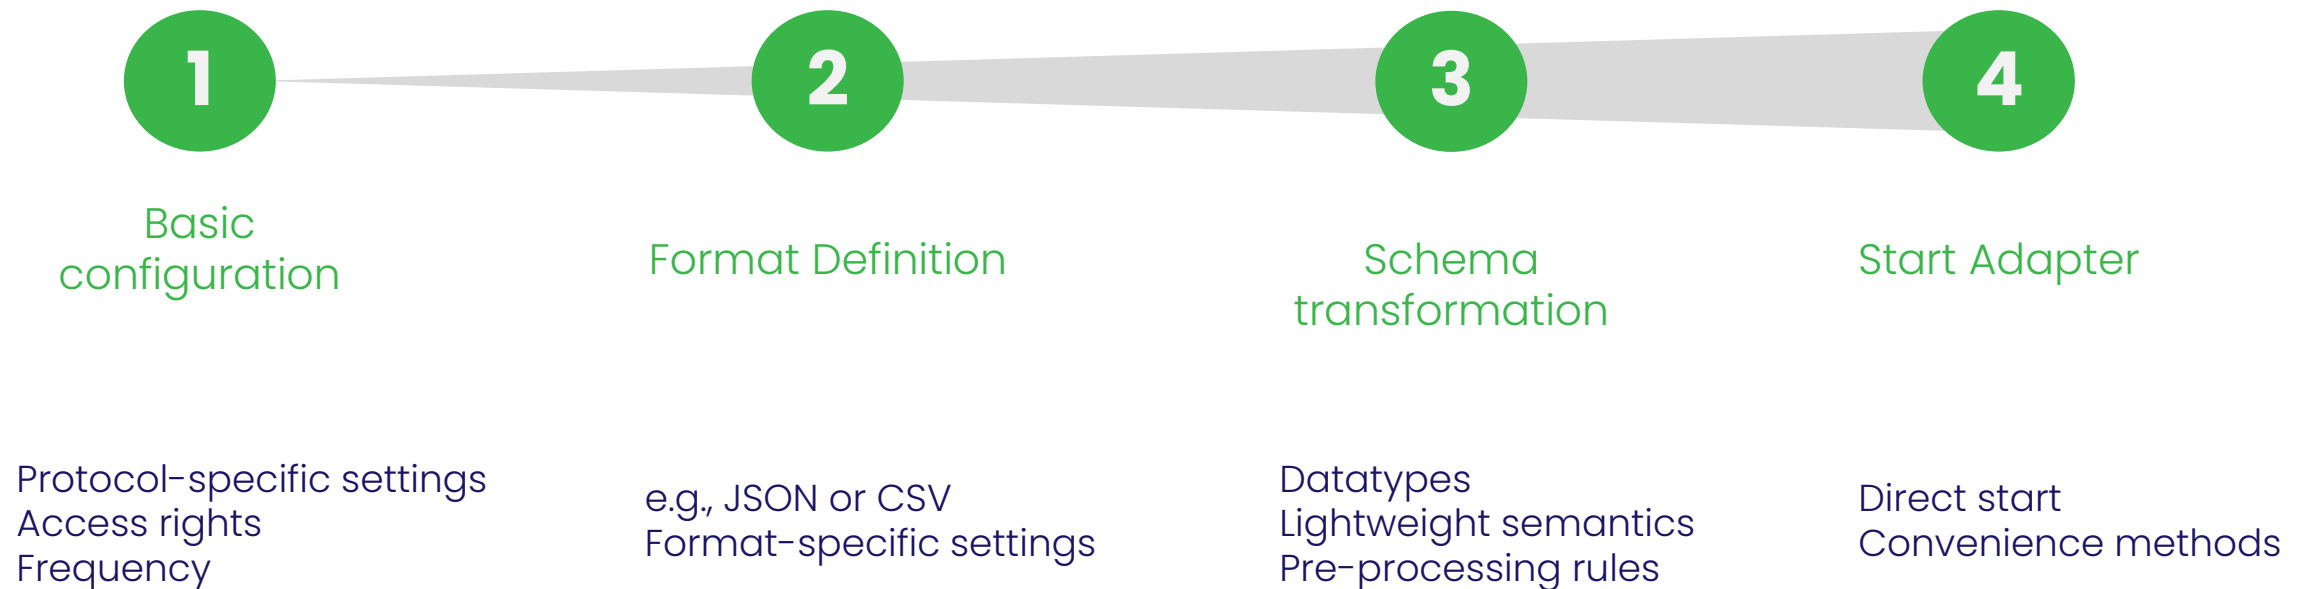

StreamPipes Components

Connect data

Process

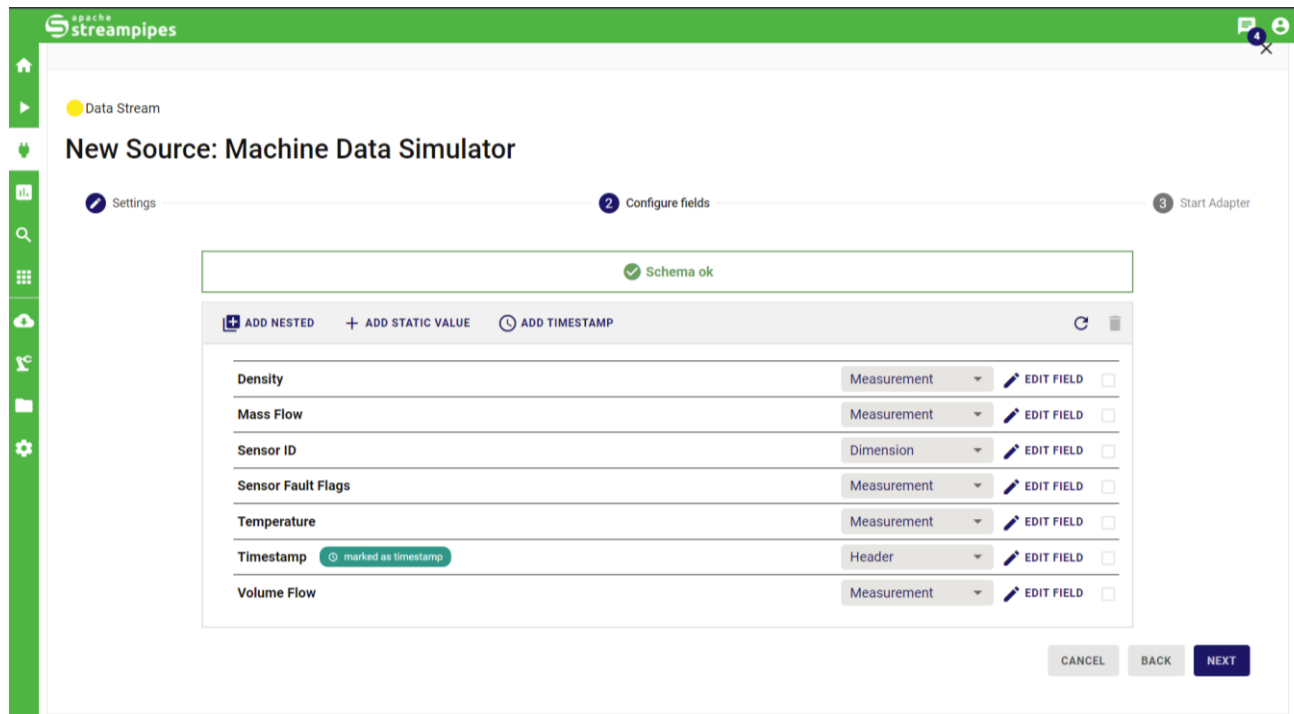

Demo!

Connect data

Schema editor: Features

Events always need a timestamp!

ggf. Transformation anwenden

Category

Measurement
Dimension
Header

Schema

Runtime Name (key at runtime)
Semantic Type (e.g., oil temperature)
Field Data Type (e.g., integer)

Value transformation

Correction Value (Factor)
Math Operator (Multiply, Add, Subtract)

Unit transformation

Input unit
Output unit

**Visualize & explore
industrial data**

Visualize & explore data

Tools

Live Dashboard

Simply consume live data, e.g., shop floor monitoring

Data Explorer

Explore data interactively and facilitate data understanding

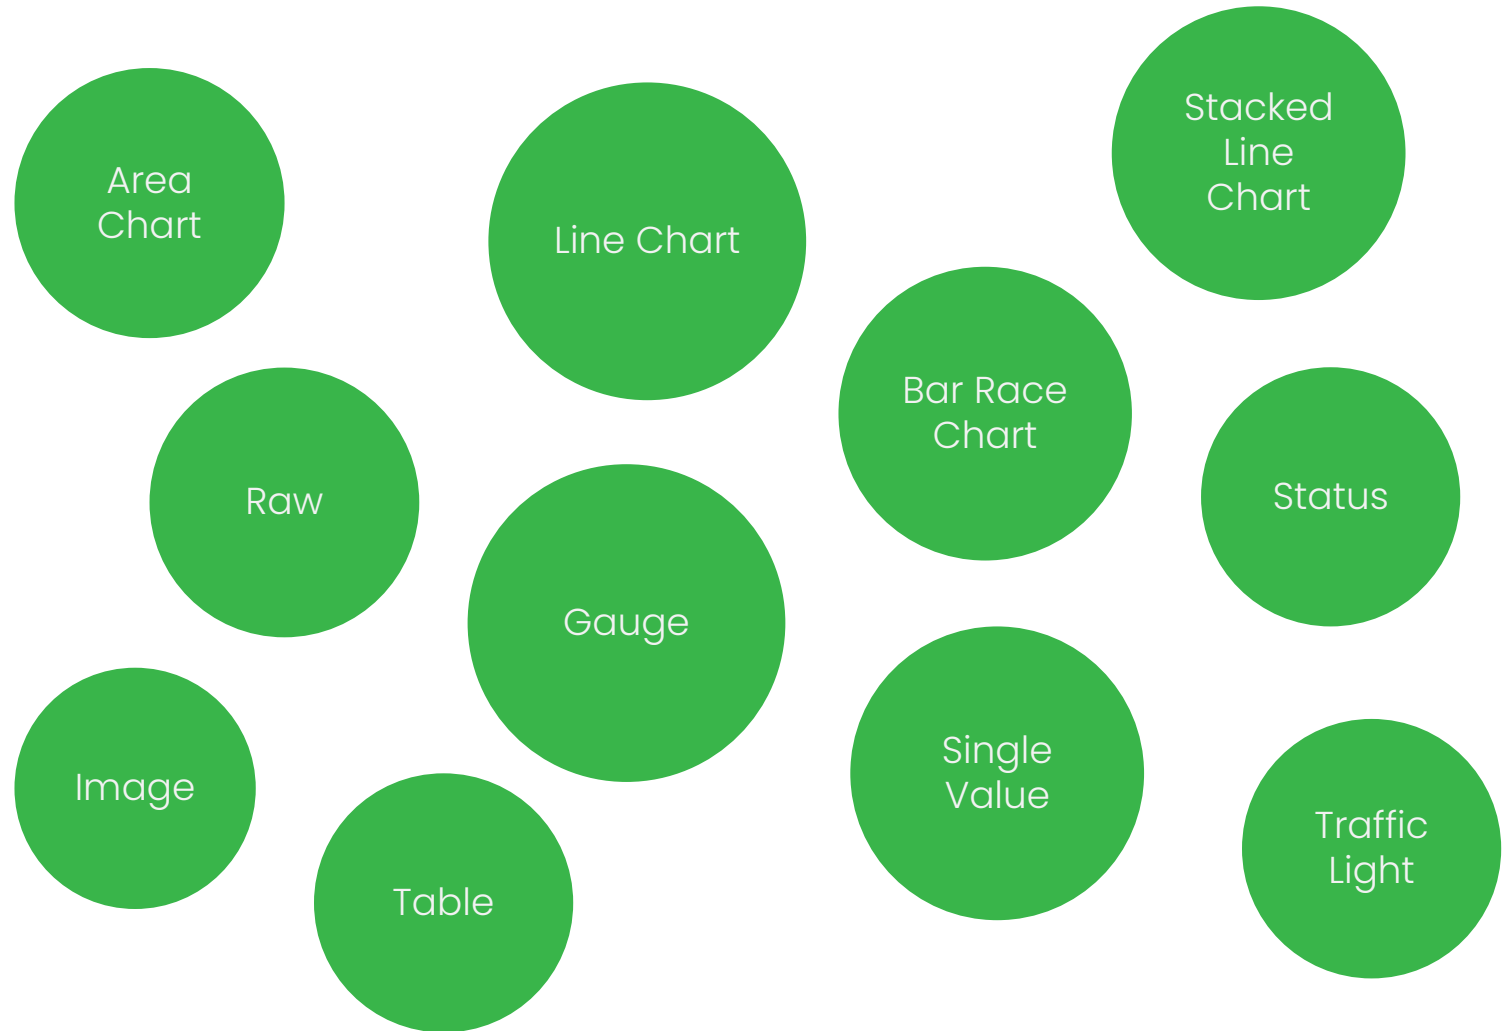

Live Dashboard

Available visualizations & process

Requirement:
Persisted data stream

- 1 Create dashboard
- 2 Choose pipeline
- 3 Choose widget
- 4 Configure widget

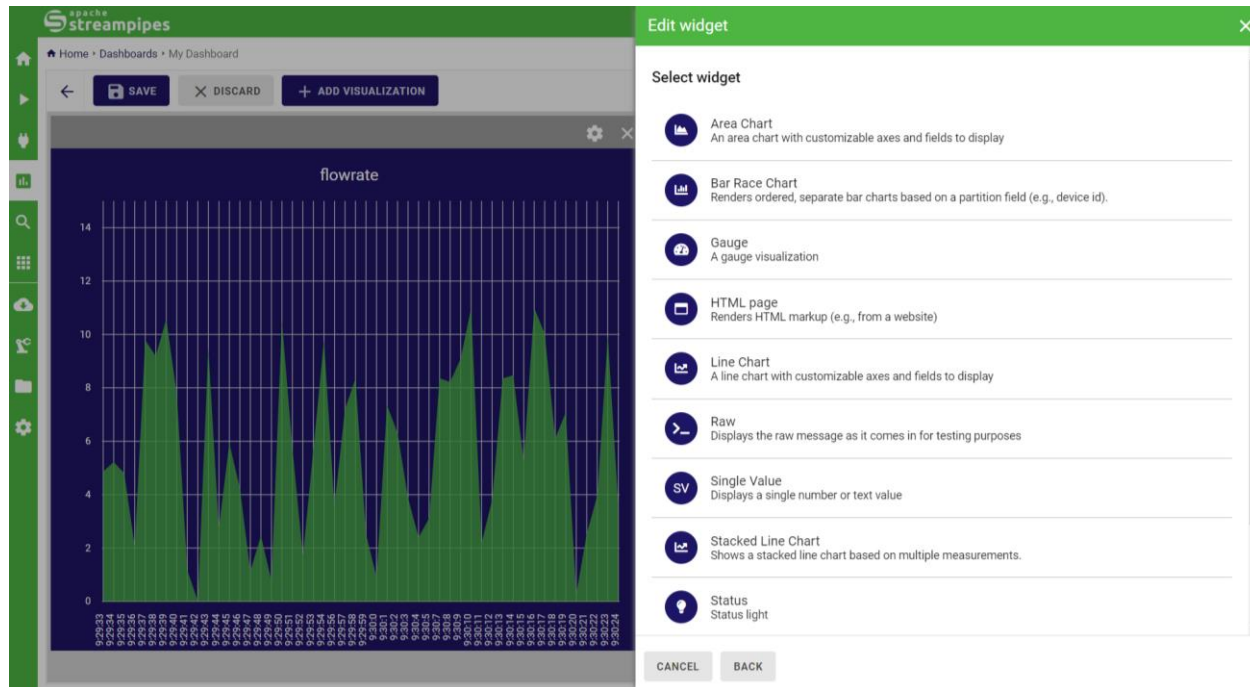

Demo!

Live Dashboard

Summary

Available Visualizations

Depend on the underlying event schema

Attention: Changes

Widgets might need to be reconfigured in case the underlying schema changes

Widgets without pipeline are shown as incomplete

Data Explorer

Visualizations & process

Requirement:
Persisted data stream

1

Create data view

2

Configure data and
visualization

3

Choose time range

Table

Heatmap
Values over time

Time Series

Line, Scatter, Scattered Line,
Bar, Symbol

Map

Image

Distribution

Histogram, Heatmap, Pie

Indicator

Single values, delta

2D Correlation

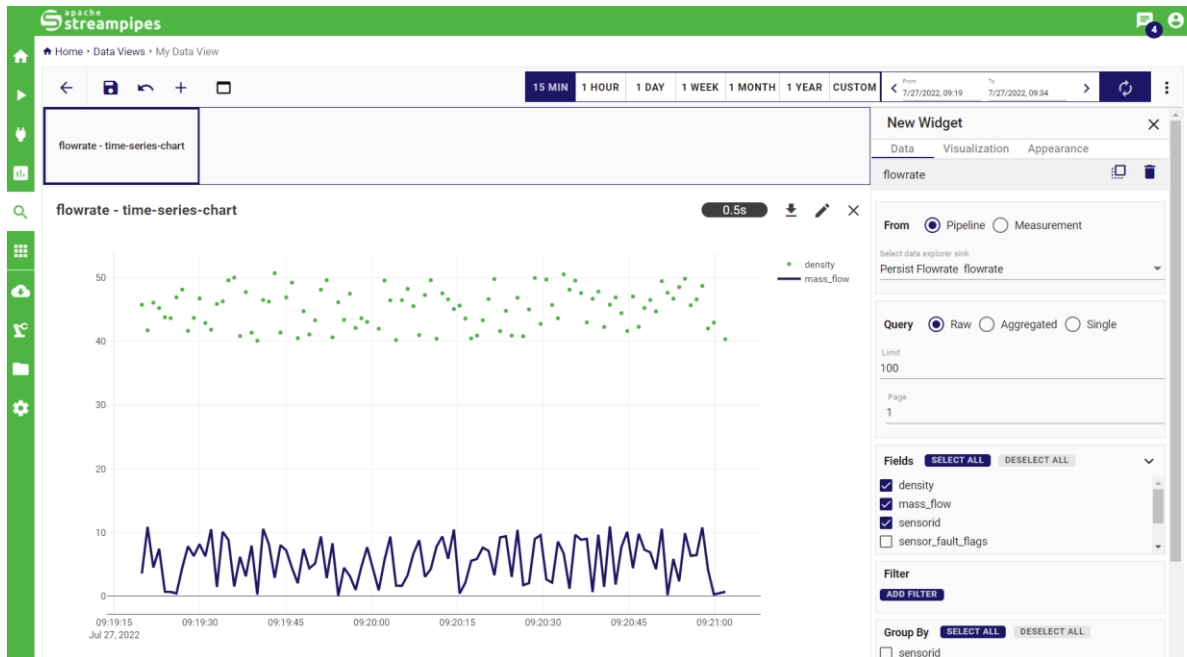

Scatter, Density Chart

Demo!

Data Explorer

Features

Configuration

Data configuration
Visualization configuration
Appearance configuration

Time Selection

Always applies for all widgets

Views

Grid View („dashboard style“)
Slide View („powerpoint style“)

Data Volume

Warning when query returns too many data items which would overload browser, can be manually overridden

**Create data analytics
pipelines**

Pipelines and pipeline element types

The screenshot shows the StreamPipes Pipeline Editor interface. At the top, there are navigation tabs for DATA SETS, DATA STREAMS, DATA PROCESSORS, and DATA SINKS. Below these is a search bar labeled 'Find Element' and a 'Filter by category' dropdown. A grid of various pipeline elements is displayed, including icons for sensors, collectors, processors, and sinks. Below the grid, three panels are visible, each with a label and a corresponding pipeline diagram:

- Data Streams** (yellow background): Shows two circular nodes representing data sources, one with a pulse icon and another with two nodes labeled S₁ and S₂.
- Data Processors** (teal background): Shows a central pipeline diagram with a 'Sensor State' processor, a 'UR Stats Collector' processor, and a 'KPI' processor.
- Data Sinks** (dark blue background): Shows two sink nodes, one with a bar chart icon and another with the StreamPipes logo.

Pipelines

Create pipeline

1

Choose data stream

2

Choose processor or sink

3

Configure element

4

Start pipeline

Goal

Flexibly harmonize and analyze data streams

Approach

Drag and drop interface to connect data with algorithms and sinks

Verification

The system prevents the creation of pipelines with incompatible data structures

Demo!

Pipelines

Features

Pipeline Editor

Element selection

Sort by name/group
(average) documentation included
Recommender
Compatible elements

Debugging

Live Preview

Convenience

Pipeline Element Templates
Auto Layout

Pipeline Details

Overview

Overview of pipelines, pipeline actions (start, modify, delete)
Only non-running pipelines can be edited

Monitoring

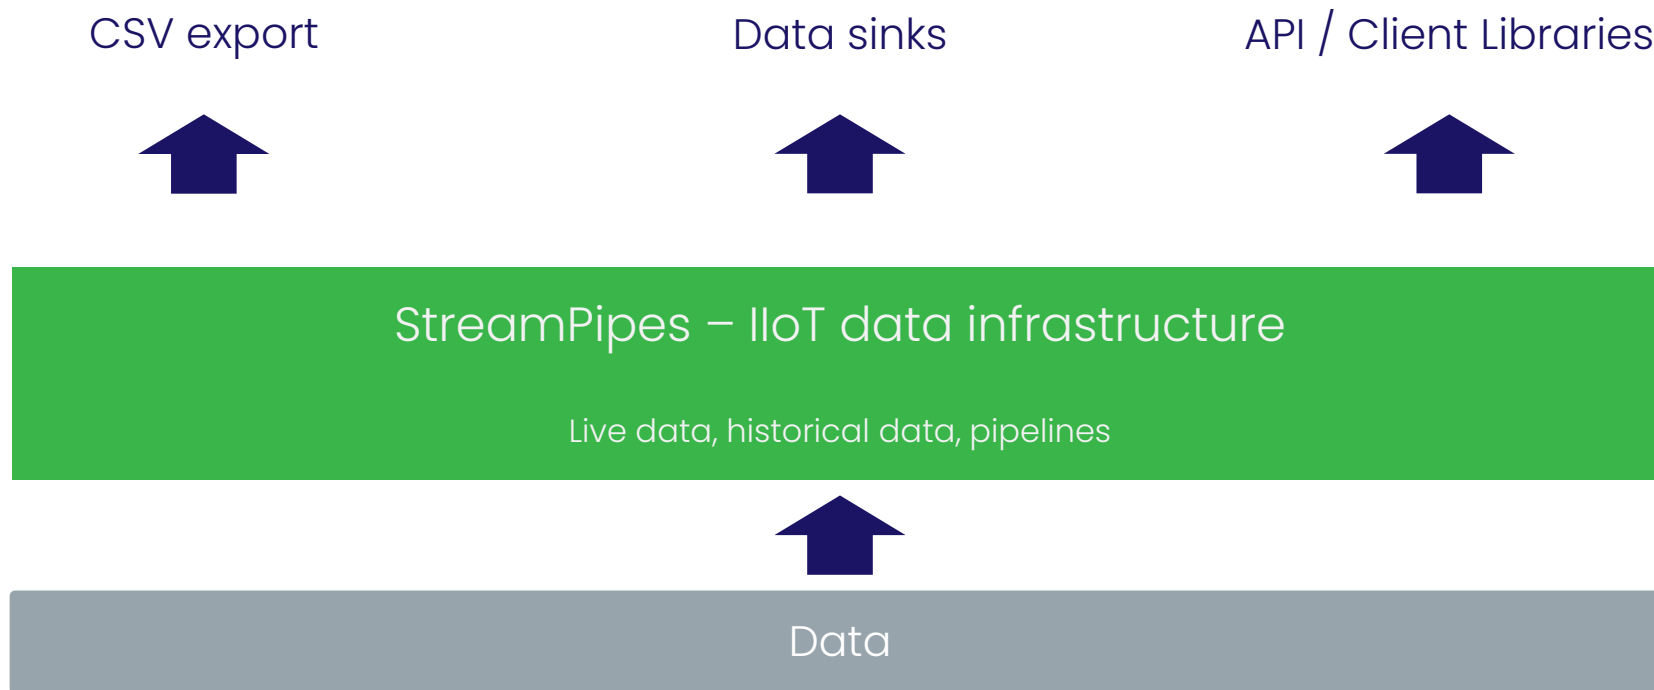

Overview of running pipelines, exceptions and metrics (in progress)

Quick Edit

Edit pipeline element configurations

**Use data in external
systems**

Interaction with external systems

Data Export

Data Explorer

The screenshot shows the Apache StreamPipes Data Explorer interface. On the left, a time-series chart titled 'flowrate - time-series-chart' displays two data series: a green scatter plot and a blue line plot. The x-axis represents time from 09:53:15 to 09:54:00 on July 27, 2022. The y-axis ranges from 0 to 50. On the right, a 'Download data' dialog box is open, showing a progress indicator with three steps: '1 Select Data', '2 Select Format', and '3 Download'. The 'Select Data' step is active, with three radio button options: 'Currently configured query' (selected), 'All data in database', and 'All data in custom time interval'. A date range '7/27/2022, 09:53 - 7/27/2022, 10:00' is displayed below the options. At the bottom of the dialog, there are 'CLOSE' and 'NEXT' buttons.

CSV-Export

From query
Complete data
Filter by time

Exported data

Matches query, not necessarily the visualization

Additional

opportunities
Data forwarding using pipelines

Accessing StreamPipes features from external applications

Applications

Change pipeline lifecycle from external apps

Modify pipelines from external apps

Provide live data to external apps

Load historical data into external apps

API Communication

StreamPipes Client

Java library

```
1 public static void main(String[] args) {
2     StreamPipesCredentials credentials = StreamPipesCredentials
3         .from(System.getenv("user"), System.getenv("apiKey"));
4
5     // Create an instance of the StreamPipes client
6     StreamPipesClient client = StreamPipesClient
7         .create("localhost", 80, credentials, true);
8 }
```

```
1 // Get all pipelines
2     List<Pipeline> pipelines = client.pipelines().all();
3
4     // Start a pipeline
5     PipelineOperationStatus message = client.pipelines().start(pipelines.get(0));
6
7     // Get all data streams
8     List<SpDataStream> dataStreams = client.streams().all();
9
10    // Subscribe to a data stream
11    client.streams().subscribe(dataStreams.get(0), event -> MapUtils.debugPrint(System.out, "event",
    event.getRaw()));
```

How to extend StreamPipes

Ways to extend StreamPipes

Adapters and pipeline elements using
SDK

UI extensions using microfrontends

Software Development Kit

Ziel

Extend StreamPipes with additional pipeline elements, e.g., adapters for specific protocols, or sinks

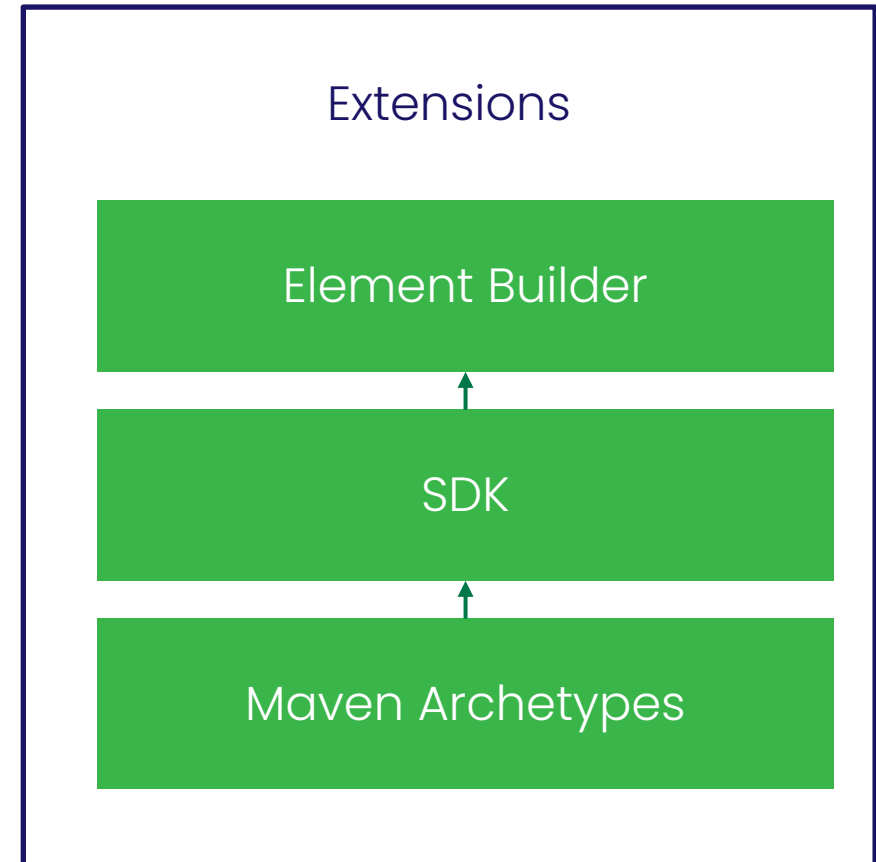

Features

Java-based SDK

Fully configurable UI elements

Maven archetypes

Installation at runtime

UI Extensions

Microfrontends

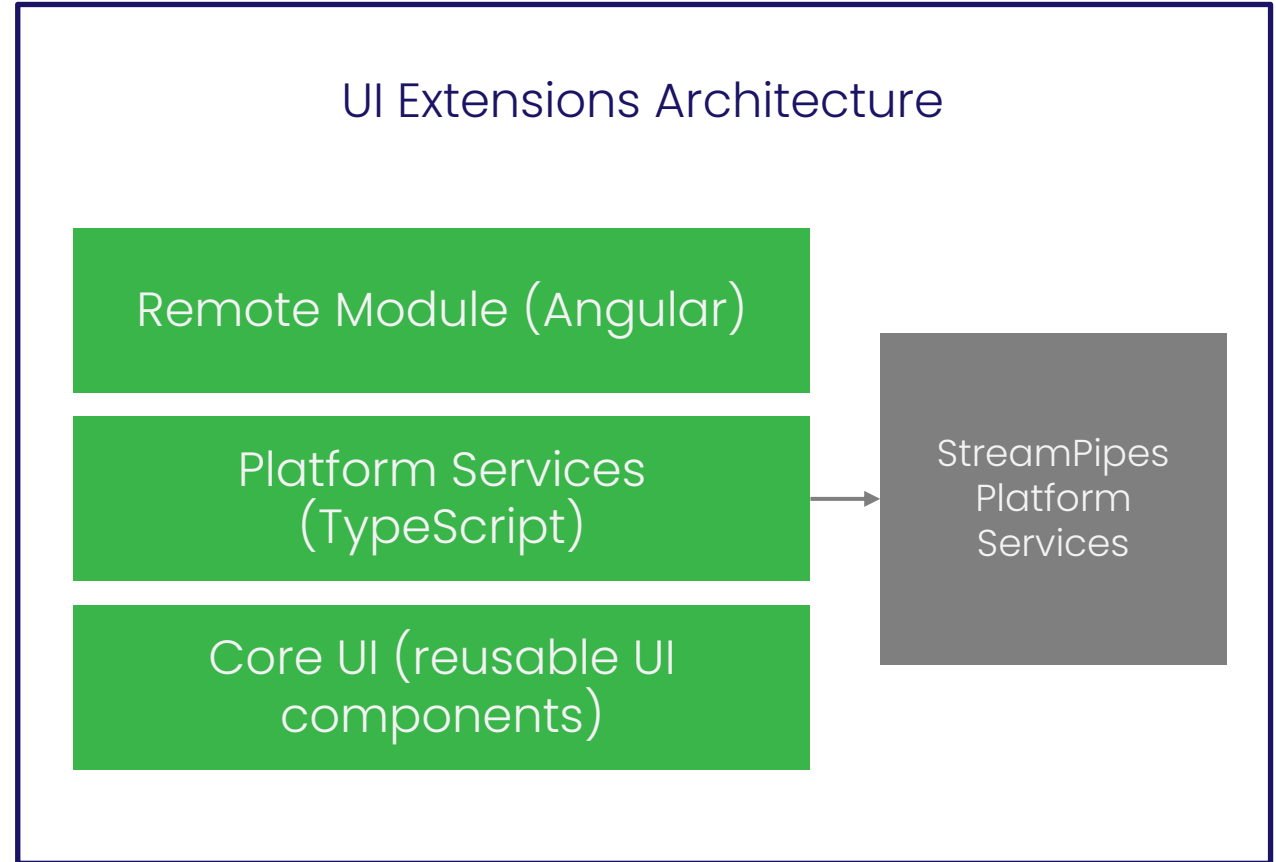

Goal

Create UI addons for specific use cases which build upon StreamPipes services

Features

Typescript SDK for all platform features (e.g. pipelines, data, data explorer views, ...)

Dedicated storage API for data bound to a specific extension

Roadmap / How to contribute

Roadmap

Current community work

Revival of python
wrapper

Improved pipeline &
adapter monitoring

Improved
documentation

Want to get involved?

How to contribute

- Check our **issues in Jira** to get started
- Subscribe to **mailing lists** and get involved in the discussions
- Help us grow the community
- Looking to contribute?
 - Core/UI features
 - Extensions (adapters, processors, sinks)
 - Docs/Blog posts
