

# Installation of Apache OpenMeetings 3.3.2 on Debian 8

This tutorial is made based on fresh installations of

# debian-8.6.0-amd64-CD-1.iso

It is tested with positive result. We will use the Apache's binary version OpenMeetings 3.3.2 stable, that is to say will suppress his compilation. It is done step by step.

22-9-2017

Starting...

1)

First update and upgrade the OS:

apt-get update

apt-get upgrade

2)

#### ----- Installation of Oracle Java 1.8 -----

OpenMeetings 3.3.2 need Java 1.8 to work. Add repository to install Oracle Java 1.8.

(Only one line with space between both)

echo "deb http://ppa.launchpad.net/webupd8team/java/ubuntu trusty main" | tee /etc/apt/sources.list.d/webupd8team-java.list

echo "deb-src http://ppa.launchpad.net/webupd8team/java/ubuntu trusty main" | tee -a /etc/apt/sources.list.d/webupd8team-java.list

apt-key adv --keyserver hkp://keyserver.ubuntu.com:80 --recv-keys EEA14886

# apt-get update

To accept the license automatically when install it:

(Only one line without space between both)

 $echo\ oracle-java 8-installer\ shared/accepted-oracle-license-v1-1\ select\ true\ |\ sudo\ /usr/bin/debconf-set-selections$ 

...now install Oracle Java:

apt-get install oracle-java8-installer

Maybe you have installed various versions of Java. We select the just installed Oracle Java:

update-alternatives -- config java

To know the active java version:

java -version

3)

----- Installation of LibreOffice ------

LibreOffice is need it to convert to pdf the uploaded files.

apt-get install libreoffice

4)

#### -----Installation ImageMagic, Sox and Swftools -----

ImageMagic, work the image files jpg, png, gif, etc. Will install it and some paquets and libraries:

apt-get install imagemagick libgif4 libgif-dev zlib1g-dev liboil0.3 unzip make

apt-get install build-essential libfreetype6-dev wget

Sox, work the audio. Will compile.

cd /opt

wget http://sourceforge.net/projects/sox/files/sox/14.4.2/sox-14.4.2.tar.gz

tar xzvf sox-14.4.2.tar.gz

cd /opt/sox-14.4.2

./configure

make && make install

**Swftools**. LibreOffice convert the uploaded office files to pdf, and Swftools convert these pdf to swf (flash file); that later will show in the whiteboard. Don't use a newer version, surely have not pdf2swf.

For 64 bit:

cd /opt

(Only one line without space between both)

 $wget\ http://old-releases.ubuntu.com/ubuntu/pool/universe/s/swftools/swftools_0.9.0-0ubuntu1\_amd64.deb$ 

dpkg -i swftools\_0.9.0-0ubuntu1\_amd64.deb

echo "swftools hold" | sudo dpkg --set-selections

For 32 bit:

cd /opt

(Only one line without space between both)

(To block version)

wget http://old-releases.ubuntu.com/ubuntu/pool/universe/s/swftools/swftools\_0.9.0-0ubuntu1 i386.deb

dpkg -i swftools\_0.9.0-0ubuntu1\_i386.deb

echo "swftools hold" | sudo dpkg --set-selections (To block version).

5)

----- Installation of Adobe Flash Player -----

OpenMeetings even need Adobe Flash Player for rooms. Add repository to can install it:

gedit /etc/apt/sources.list

...copy-paste these two lines and comment: # deb cdrom:[Debian GNU/Linux 8 \_Jessie\_ ...

deb http://ftp.us.debian.org/debian jessie contrib non-free deb http://ftp.us.debian.org/debian jessie contrib

...save, update:

apt-get update

...and install:

apt-get install flashplugin-nonfree

6)

# ----- Compilation of FFmpeg ------

FFmpeg will work the video.

This compilation is based on:

# https://trac.ffmpeg.org/wiki/CompilationGuide/Ubuntu

Updated to 22-9-2017. Install libraries.

(Only one line with space between each one)

apt-get -y --force-yes install autoconf automake libass-dev libfreetype6-dev libgpac-dev libsdl1.2-dev libtheora-dev libtool libva-dev libvdpau-dev libvorbis-dev libxcb1-dev libxcb-shm0-dev libxcb-xfixes0-dev pkg-config texi2html zlib1g-dev nasm libx264-dev cmake mercurial libopus-dev curl git

I made a script that will download, compile and install ffmpeg. It is tested and works rightly. The result of any recording we do in OpenMeetings, will be in mp4 format. Please, download the script.

cd /opt

(Only one line without space between both)

wget https://cwiki.apache.org/confluence/download/attachments/27838216/ffmpeg-ubuntu-debian.sh

...concede permission of execution:

chmod +x ffmpeg-ubuntu-debian.sh

...and run it (be connected to Internet). The compilation will spend about 30 minutes:

./ffmpeg-ubuntu-debian.sh

When finish the compilation, a text will appear:

FFmpeg Compilation is Finished!

Then, please, go to step 7).

But if you prefer copy and paste (i don't advise), here leave the commands script:

sudo gedit /opt/ffmpeg.sh

...copy and past from here:

# FFmpeg compilation for Ubuntu and Debian.# Alvaro Bustos. Thanks to Hunter.# Updated 22-9-2017

sudo apt-get update sudo apt-get -y --force-yes install autoconf automake build-essential libass-dev libfreetype6-dev libsdl1.2-dev libtheora-dev libtool libva-dev libvdpau-dev libvorbis-dev libxcb1-dev libxcb-shm0dev libxcb-xfixes0-dev pkg-config texi2html zlib1g-dev mercurial cmake

# Create a directory for sources. SOURCES=\$(mkdir ~/ffmpeg\_sources) cd ~/ffmpeg\_sources

# Download the necessary sources. wget ftp://ftp.gnome.org/mirror/xbmc.org/build-deps/sources/lame-3.99.5.tar.gz wget http://www.tortall.net/projects/yasm/releases/yasm-1.3.0.tar.gz curl -#LO ftp://ftp.videolan.org/pub/x264/snapshots/last\_stable\_x264.tar.bz2 hg clone https://bitbucket.org/multicoreware/x265 wget -O fdk-aac.tar.gz https://github.com/mstorsjo/fdk-aac/tarball/master wget http://downloads.xiph.org/releases/opus/opus-1.1.5.tar.gz wget http://storage.googleapis.com/downloads.webmproject.org/releases/webm/libvpx-1.5.0.tar.bz2 git clone --depth 1 git://source.ffmpeg.org/ffmpeg

# Unpack files
for file in `ls ~/ffmpeg\_sources/\*.tar.\*`; do
tar -xvf \$file
done

cd yasm-\*/

./configure --prefix="\$HOME/ffmpeg\_build" --bindir="\$HOME/bin" && make && sudo make install && make distclean; cd ..

cd x264-\*/ PATH="\$HOME/bin:\$PATH" ./configure --prefix="\$HOME/ffmpeg\_build" --bindir="\$HOME/bin" --enable-static && PATH="\$HOME/bin:\$PATH" make && sudo make install && make distclean; cd ..

cd x265/build/linux PATH="\$HOME/bin:\$PATH" cmake -G "Unix Makefiles" -DCMAKE\_INSTALL\_PREFIX="\$HOME/ffmpeg\_build" -DENABLE\_SHARED:bool=off ../../source && make && sudo make install && make distclean; cd ~/ffmpeg\_sources

cd mstorsjo-fdk-aac\*

autoreconf -fiv && ./configure --prefix="\$HOME/ffmpeg\_build" --disable-shared && make && sudo make install && make distclean; cd ..

#### cd lame-\*/

./configure --prefix="\$HOME/ffmpeg\_build" --enable-nasm --disable-shared && make && sudo make install && make distclean; cd ..

#### cd opus-\*/

./configure --prefix="\$HOME/ffmpeg\_build" --disable-shared && make && sudo make install && make distclean; cd ..

#### cd libvpx-\*/

PATH="\$HOME/bin:\$PATH" ./configure --prefix="\$HOME/ffmpeg\_build" --disable-examples --disable-unit-tests && PATH="\$HOME/bin:\$PATH" make && sudo make install && make clean; cd ..

#### cd ffmpeg

PATH="\$HOME/bin:\$PATH" PKG\_CONFIG\_PATH="\$HOME/ffmpeg\_build/lib/pkgconfig" ./configure --prefix="\$HOME/ffmpeg\_build" --pkg-config-flags="--static" --extra-cflags="-I\$HOME/ffmpeg\_build/include" --extra-ldflags="-L\$HOME/ffmpeg\_build/lib" --bindir="\$HOME/bin" --enable-gpl --enable-libass --enable-libfdk-aac --enable-libfreetype --enable-libmp3lame --enable-libopus --enable-libtheora --enable-libvorbis --enable-libvpx --enable-libx264 --enable-libx265 --enable-nonfree && PATH="\$HOME/bin:\$PATH" make && sudo make install && make distclean && hash -r; cd ..

 $cd \sim /bin$ 

cp ffmpeg ffprobe ffplay ffserver vsyasm x264 yasm ytasm /usr/local/bin

cd ~/ffmpeg\_build/bin cp lame x265 /usr/local/bin

echo "FFmpeg Compilation is Finished!"

#### ...to here.

Concede permission of execution:

chmod +x /opt/ffmpeg.sh

Now be connected to Internet, run the script and wait some long minutes while the compilation:

cd /opt

./ffmpeg.sh

All the compiled files will be installed in: /usr/local/bin

# ----- Installation and configuration of MariaDB data server -----

MariaDB is the data server.

It is in Jessie repository. Install these packages:

sudo apt-get install python-software-properties software-properties-common

...and now MariaDB:

apt-get install mariadb-server

Will open a window asking for a root MariaDB password:

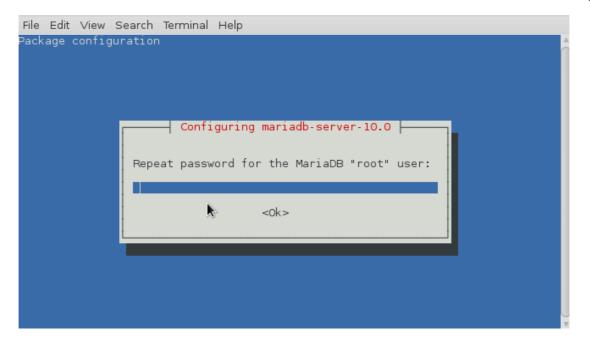

File Edit View Search Terminal Help	
Package configuration	
Configuring mariadb-server-10.0 While not mandatory, it is highly recommended that you set a password for the MariaDB administrative "root" user.	
If this field is left blank, the password will not be changed.	
New password for the MariaDB "root" user:	
<0k>	

Type the password you like it  $\rightarrow$  **Ok**  $\rightarrow$  **Enter** 

...will ask repeat the password:

7)

#### Pag 7

#### Run MariaDB:

/etc/init.d/mysql start

Make a database for OpenMeetings. User password must be of 8 digits minimum:

#### mysql -u root -p

...will ask for the root password that we have just choosen, type it...

MariaDB [(none)]> CREATE DATABASE open332 DEFAULT CHARACTER SET 'utf8';

With this command we has created a database called open332. Now we create a user with all permission on this database.

(Only one line with space between both)

# MariaDB [(none)]> GRANT ALL PRIVILEGES ON open332.\* TO 'hola'@'localhost' IDENTIFIED BY '1a2B3c4D' WITH GRANT OPTION;

- \* open332 .....is the database name.
- \* hola .....is the user name for this database.
- \* 1a2B3c4D ... is the password of this user.

You can change the data...but remember it! Later we'll need it.

Now we leave MariaDB:

MariaDB [(none)]> quit

8)

#### ----- Installation of OpenMeetings ------

We'll install OpenMeetings in /opt/red5332. All the following information will be based on this directory.

Call to our folder of installation red5332

Make the folder:

mkdir /opt/red5332

cd /opt/red5332

wget http://apache.miloslavbrada.cz/openmeetings/3.3.2/bin/apache-openmeetings-3.3.2.zip

unzip apache-openmeetings-3.3.2.zip

...save the unloaded file to /opt:

mv apache-openmeetings-3.3.2.zip /opt

Do to **nobody** owner of the whole OpenMeetings folder installation, for security:

chown -R nobody /opt/red5332

Download and install the connector between OpenMeetings and MariaDB:

cd /opt

(Only one line without space between both)

wget http://repo1.maven.org/maven2/mysql/mysql-connector-java/5.1.42/mysql-connector-java-5.1.42.jar

...and copy it to where must be:

cp /opt/mysql-connector-java-5.1.42.jar /opt/red5332/webapps/openmeetings/WEB-INF/lib

Now we are going to form OpenMeetings for our database in MariaDB:

gedit /opt/red5332/webapps/openmeetings/WEB-INF/classes/META-INF/mysql\_persistence.xml

# Modify on line 72:

, Url=jdbc:mysql://localhost:3326/openmeetings\_3\_3?

...to

, Url=jdbc:mysql://localhost:3326/open332?

... it is the name of the database that we did initially.

If you choose another name for the database, please type it here. Save the changes.

We protect the access to the file:

(Only one line without space between both)

chmod 640 /opt/red5332/webapps/openmeetings/WEB-INF/classes/META-INF/mysql\_persistence.xml

9)

----- Script to launch red5-OpenMeetings ------

Please, download the red5 run script:

cd /opt

wget https://cwiki.apache.org/confluence/download/attachments/27838216/red5-ubdeb2

...and copy it to:

cp red5-ubdeb2 /etc/init.d/

Concede permission of execution:

chmod +x /etc/init.d/red5-ubdeb2

If you made the installation in any other different path to /opt/red5332, please edit the script and modify the line:

RED5\_HOME=/opt/red5332

...to

#### RED5\_HOME=/your-path-installation

10)

----- Run red5-OpenMeetings ------

Start MariaDB if still it is not:

/etc/init.d/mysql start

...and now start red5-OpenMeetings:

/etc/init.d/red5-ubdeb2 start

...will appear two text lines in the shell:

start-stop-daemon: --start needs --exec or --startas Try 'start-stop-daemon --help' for more information.

...you do nothing. Don't worry, everything work right.

Wait about 40 seconds minimum, in order that red5 it is runing completely, and later can go to:

http://localhost:5080/openmeetings/install

...there will appear a page similar to this one:

OpenMeetings				
1. Enabling import of PDFs into whiteboard				
<ul> <li>Install GhostScript on the server, you can get more information on <a href="http://pages.cs.wisc.edu/~ghost/">http://pages.cs.wisc.edu/~ghost/</a> regarding installation. The instructions for installation can be found there, however on most linux systems you can get it via your favorite package managers (apt-get it).</li> <li>Install SWFTools on the server, you can get more information on <a href="http://www.swftools.org/">http://www.swftools.org/</a> regarding installation. Some of the Linux distributions already have it in there package manager see <a href="http://packages.debian.org/unstable/utils/swftools">http://www.swftools.org/</a> regarding installation. Some of the Linux distributions already have it in there package manager see <a href="http://packages.debian.org/unstable/utils/swftools">http://www.swftools.org/</a> regarding installation. Some of the Linux distributions already have it in there package manager see <a href="http://packages.debian.org/unstable/utils/swftools">http://packages.debian.org/unstable/utils/swftools</a>), the recommended version of SWFTools is 0.9 as prior version have a bug that does lead to wrong object dimensions in the Whiteboard</li> </ul>				
If you have further questions or need support in installation or hosting:				
Community-Support:				
Mailing lists				
Commercial-Support:				
<u>Commercial-Support</u>				
< >> Finish				

Push button (bottom), and will show the default database configuration with Derby, but we employ MySQL (MariaDB):

OpenMeetings
DB configuration
Recommendation for production environment
By default OpenMeetings uses the integrated <u>Apache Derby</u> database. For production environment you should consider using <u>MySQL</u> , <u>PostgreSql</u> , <u>IBM DB2</u> , <u>MSSQL</u> or <u>Oracle</u>
NOTE Please use unpredictable DB login and 'strong' password with length 8 characters or more.
Choose DB type Apache Derby
Specify the name of the database openmeetings Check
< > >> Finish

...then, scroll and Choose DB type to MySQL:

OpenMeetings	
DB configuration	
Recommendation for production environment	
By default OpenMeetings uses the integrated <u>Apache Derby</u> database. F using <u>MySQL, PostgreSql, IBM DB2, MSSQL</u> or <u>Oracle</u>	For production environment you should consider
NOTE Please use unpredictable DB login and 'strong' password with length	8 characters or more.
Choose DB type MySQL	
Specify DB host localhost	
Specify DB port 3306	
Specify the name of the database open332	
Specify DB user	
Specify DB password	
	Check
	< >> Finish

...and will show our data base configuration we made in step 8.

If you've choose any other different name for this, will show equally. Now we must introduce the user name we did for our data base, at the step 8, and his password:

#### **Specify DB user** = hola

#### **Specify DB password** = 1a2B3c4D

Please, push **>** button, and will go to:

OpenMeetings		
Userdata		
Username		
Userpass		
EMail		
User Time Zone	Europe/Madrid	
Group(Domains)		
Name		
		< > >> Finish

Here, we must introduce a user name for OpenMeetings, and his password. This must have 8 digits minimum, and at least 1 special symbol like: +(%#!...etc.)

Username	; =	a-namethis user will be administrator.
Userpass	=	a-password for the previous user.
Email	=	email-adress of the previous user.
User Time	e Zoi	$\mathbf{n}\mathbf{e}$ = country where is this serve
Name	=	example-openmeetingsgroup name to choose.

Press the button and will lead us to a new page (below) where you can select the language for your OpenMeetings server, as well as other options such as the configuration of the mail server being used to send invitations or meetings from OpenMeetings:

onfiguration				
Allow self-registering (allow_frontend_register)	Yes	~		
Send Email to new registered Users (sendEmailAtRegister)	No	~		
New Users need to verify their EMail (sendEmailWithVerficationCode)	No	~		
Default Rooms of all types will be created	Yes	~		
Mail-Referer (system_email_addr)	noreply@openmeetin	gs.apache.org	]	
SMTP-Server (smtp_server)	localhost			
SMTP-Server Port(default Smtp-Server Port is 25 (smtp_port)	25		]	
SMTP-Username (email_username)			]	
SMTP-Userpass (email_userpass)				
Enable TLS in Mail Server Auth	No	~	·	-
Set inviter's email address as ReplyTo in email invitations (inviter.email.as.replyto)	Yes	~		
Default Language	inglés	~ ]		
Default Font for Export [default_export_font]	TimesNewRoman	~		

A valid example to configure the mail server with Gmail, is as follows: (replace **john@gmail.com** with your real Gmail account)

Mail-Refer (system_email_addr)	==	john@gmail.com
SMTP-Server (smtp_server)		smtp.gmail.com
SMTP-Server Port (default Smtp-Server Port is 25) (smtp_port)	==	587
SMTP-Username (email_username)	==	john@gmail.com
SMTP-Userpass (email_userpass)	==	password of john@gmail.com
Enable TLS in Mail Server Auth	==	Yes

To select the language of your server OpenMeetings, please scroll on the line:

#### **Default Language**

== english

...the rest we can leave as is. If necessary, can modify it as you like it.

Now press the button  $\geq$  and a new page will appear:

OpenMeetings		
Converters		
SWFTools Zoom 🕚	100	
SWFTools JPEG Quality	85	
SWFTools Path		Check
ImageMagick Path 🛛 💿		Check
FFMPEG Path		Check
SoX Path		Check
OpenOffice/LibreOffice Path for jodconverter		Check
see also <u>Installation</u>		
		< > >> Finish

Here we'll introduce the respective paths for the image, video, audio and conversion of uploaded files:

SWFTools Path (Path)	==	/usr/bin
ImageMagick Path (Path)		/usr/bin
FFMPEG Path (Path)	==	/usr/local/bin
SOX Path (Path)	==	/usr/local/bin
OpenOffice/LibreOffice Path (Path) for jodconverter	==	/usr/lib/libreoffice (32 - 64bits)

As you go introducing paths, you can check if they are correct by pressing the button labeled **Check**. If it does not display any error message, that is OK.

Once completed the paths, please click the button and move on to another page that would be to activate the SIP. We will leave it as is, unless you want to activate it knowing what it does:

org.apache.openmeetings.util.crypt.SHA
equal to PHP-MD5 function or BSD-Style encryption by <b>pt MD5CryptImplementation</b> for more information or to write your own Crypt-Style lit this value later BUT previous created Users and Sessions might be not usable
No 🗸
400
ms
rooms

Now push the button *>* Will show this window:

OpenMeetings	
Please click "Finish" button to start installation!	
	< > >> Finish

Push Finish button ...wait a seconds untill the tables are fill in the database.

When has concluded, this another page will appear. Don't clic on <u>Enter the Application</u>. First is need it to restart the server:

/etc/init.d/red5-ubdeb2 restart

#### OpenMeetings

Enter the Application
Database was changed, please restart application to avoid possible issues
If your Red5-Server runs on a different Port or on a different domain alter the config values of the client
Mailing list
http://openmeetings.apache.org/mail-lists.html
There are some companies that also offer commercial support for Apache OpenMeetings:
http://openmeetings.apache.org/commercial-support.html
< > >> Finish

Now yes, you can clic on **Enter the Application**, or go with your browser to:

# http://localhost:5080/openmeetings

...and will take us to the entry of OpenMeetings:

Login	
Username or mail address Password	
Forgotten your password?	Remember login <u>Network testing</u>
1	Not a member? Sign in

Introduce the user's name and the password that you have chosen during the installation, push the **Sign in** button and...

#### ...Congratulations!

The next time that you like to accede to OpenMeetings will be:

# http://localhost:5080/openmeetings

Remember to open in the server, the two following ports:

#### 1935 5080

... in order that it could accede to OpenMeetings from other machines in Lan or from Internet.

#### 11)

#### ----- OpenMeetings's configuration ------

Once you acced to OpenMeetings, if you would like to do any modification in the configuration, please go to:

#### Administration $\rightarrow$ Configuration

Home 🗸	Rooms 🗸	Recordings 🗸	Administration -
▽ Welcome			<b>•</b>
?	<b>Hello firstname</b> Timezone Europe/N		
	Unread messages (		
Upload new image	Edit your profile		
Help and support			

...and following the order of the red arrows:

50 🗾 🖬 🛹	1 2 H> HI	Search
≎ ID	≎ Key	≎ Value
4	allow.oauth.register	1
5	default_group_id	1
6	smtp_server	localhost
7	smtp_port	25
8	system_email_addr	noreply@openmeetings.apache.or g
9	email_username	
10	email_userpass	
11	mail.smtp.starttls.ena ble	-
12	mail.smtp.connection. timeout	30000
13	mail.smtp.timeout	30000
14	application.name	OpenMeetings
15	default_lang_id	1
16	swftools_zoom	100
17	swftools_jpegquality	85
18	swftools_path	
19	imagemagick_path	
20	sox_path	
21	ffmpeg_path	
22	office.path	

We are going to remove files and folders that already do not serve us, if you do not prefere to save them.

rm -f /opt/mysql-connector-java-5.1.42.jar

rm -f /opt/sox-14.4.2.tar.gz

rm -f -R /opt/sox-14.4.2

And this is all.

\_\_\_\_\_

If you have some doubt or question, please raise it in the Apache OpenMeetings forums:

http://openmeetings.apache.org/mail-lists.html

Thank you.

Alvaro Bustos
