Forms

Forms / CForms / Cocoon Forms

CForms is Cocoon's form handling framework.

Documentation on it can be found on the Cocoon site:

CForms Documentation

This wiki page is the place for additional information, tutorials, design discussions, etc.

In a previous life Forms was called Woody. If you're still using Woody, check out the Woody2CocoonForms.

Old Woody docs still to be integrated into the CForms documentation:

- API:
  - WoodyFlowscriptAPI
  - WoodyJavaAPI
- WoodyFAQ
- WoodyNotes

Other stuff:

- Comparisons with similar technologies
  - CocoonFormsJSF (summary of an offlist discussion between SylvainWallez and ReinhardPoetz)
  - XMLForm and Woody (by SylvainWallez)
- WoodyTODO
- CocoonFormsRoadmap - get an overview what is left until we can release CocoonForms and who is working on which item
- WoodyScratchpad - some notes on ongoing work.
- CubistForms - Checking to see if we are covering all the angles in the drive towards "stable".

Elsewhere:

- WoodyHibernateAndFlow
- OJBBlock contains a Woody sample
- WorkingWithLocales contains some samples on Locale Usage
- The presentation Sylvain gave about Woody at the GetTogether is available online. See the events/gt2003 folder on your local Apache mirror site.
- Schema2CocoonForms generating Cocoon Forms out of an XML Schema
