Welcome to the Cocoon documentation Wiki. It is not large, it is not small, it is simply available to anyone actually feeling like adding some info to complement what's on the main Cocoon web site. Type away! Explore the publicist in you! This wiki is generally a "jumping point" for bringing new documentation into the project. See the About page to get started.

If you are attempting to evaluate Cocoon for a project, you will find the features list useful. If you are unsure whether Cocoon is right for you, please also read RulesOfTheGame.

Still not convinced? For some real-world success stories about using Cocoon, see the Testimonials page.

News / Recent Changes

(See also the Events list.)
