Woody

The "Cocoon Forms" framework (also known by the nickname Woody) is introduced starting from Cocoon 2.1. However, it is under very active development and the latest CVS versions might provide many advantages.

NEWS: The woody block has been renamed to "forms". The first Cocoon release to include this renamed version will be 2.1.5. All further development will happen on this new block, so you are encouraged to migrate. Instructions on migrating, which consists of doing some renames, can be found Woody2Coco onForms.

The new page for everything Cocoon Forms related is over here: Forms
