Apache JMeter is a 100% pure Java desktop application designed to load test functional behavior and measure performance. It was originally designed for testing Web Applications but has since expanded to other test functions.

Current Version: 5.6.3

Please note that the content on this Wiki is presented AS IS in the hope it may be useful.

The JMeter project tries to ensure accuracy of the content of the pages hosted on this Wiki, but they have no control over the content of 3rd party sites linked from these pages.
