Apache Wink is a complete Java based solution for implementing and consuming REST based Web Services. The goal of the Apache Wink framework is to provide a reusable and extendable set of classes and interfaces that will serve as a foundation on which a developer can efficiently construct applications.

## Contents

1. [Introduction to Apache Wink](#)
2. [Apache Wink Building Blocks](#)
3. [Getting Started with Apache Wink](#)
4. [JAX-RS Concepts](#)
5. [Apache Wink Server](#)
   1. Registration and Configuration
   2. Annotations
