

Maven Core Roadmap

Apache Maven 3.2 Distribution

- Open issues (Bug scrub for 3.2.0)

Apache Maven 4.0 Distribution

- TBD if we will release a version 4.0 (want to align modelVersion 5.0.0 with Maven 5.0.0, so we may just skip 4.0 or we may find some content that doesn't require a model change but would be considered "breaking" for 3.x)

Apache Maven 5.0 Distribution

- POM500, new elements
 - [MNG-1977](#) Global dependency exclusions (`project.dependencyManagement.excludes[]`)
 - [MNG-2009](#) Add new `<integrationTestSourceDirectory>` element in the POM model (`project.build.integrationDirectory`)
 - [MNG-2216](#) Add default encodings section to POM (`project.build.sourceEncoding`) <http://docs.codehaus.org/display/MAVENUS/ER/POM+Element+for+Source+File+Encoding>
 - [MNG-3344](#) Provide new POM element to configure site directory (`project.reporting.directory`)
 - [MNG-3626](#) Improve pom to handle i18n fields
 - [MNG-4149](#) Extend POM to support encoding parameter per (test) resource (`project.build.resources[].resource.sourceEncoding`)
 - [MNG-5102](#) Mixin POM fragments (`project.mixins[]`)
 - [MNG-5281](#) Remove "HEAD" as default value for `org.apache.maven.model.Scm.tag`
 - Related requirements: <https://jira.codehaus.org/browse/MODELLO-4>
- Consumer (Aether) POM vs Build POM
