Feature Concepts and Roadmap

This page provides a place to reference new feature concepts which may be included in Clicks roadmap.

Using a WIKI for concept exploration and discussion is particularly useful for features which:

- are complex;
- have significant impacts on the design of the framework; or
- may affect backward compatibility.

Please note features are often discussed in the Click development news group dev@click.apache.org and in JIRA https://issues.apache.org/jira/browse/CLK

Feature Concepts

- Java 5 Support - done
- Improve HTML imports and includes - done
- Spring Integration
- Repeater Container
