

# Configuring database pools

To configure database pools, the **Database Pools** portlet is available by selecting **Database Pools** on the **Console Navigation** menu on the left hand side. The **Database Pools** portlet illustrated in the following figure shows all the available database pools and provides wizards for importing or creating new pools.

### Database Pools [view]

This page lists all the available database pools.

For each pool listed, you can click the **usage** link to see examples of how to use the pool from your application.

Name	Deployed As	State	Actions
NoTxDatasource	Server-wide	running	<a href="#">edit usage</a>
SystemDatasource	Server-wide	running	<a href="#">edit usage</a>

Create a new database pool:
