4.1.x Stratos Samples

Samples have been provided, so that you can try out and test Stratos. The available Stratos samples vary from simple single cartridge applications to applications groups. In each of the samples, there are artifacts related to EC2, OpenStack, Kubernetes, GCE and the Stratos Mock test framework. Stratos samples can be found in the following directory:

<STRATOS_SOURCE_HOME>/samples/

Furthermore, all Stratos samples come with scripts that can be used to automatically deploy (deploy.sh) and undeploy (undeploy.sh) all the artifacts in the respective sample folder.

The following subsections describe how to work with the available samples in Stratos:
