

Mailing lists

Below are the mailing lists for the Apache NetBeans project:

| Short name | e-mail | Purpose of mailing list | Archive |
|---------------|--------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|
| announce | announce@netbeans.incubator.apache.org | Receive announcements only, e.g., when a new release is made available, i.e., for those who do not want to get much traffic though want to keep up with the high level developments of Apache NetBeans. No one other than administrators are able to write to this mailing list. | Apache Mail Archive Pony Mail |
| users | users@netbeans.incubator.apache.org | Asking questions about the usage of NetBeans, whether for Java, JavaScript, C/C++, or any other language or technology, as well as those using the NetBeans APIs for developing modules and applications. Using prefix tags in the subject line, such as [java] or [javascript] is encouraged, to clearly distinguish the topic you're addressing in your e-mail. <i>In most cases this is the mailing list you want.</i> | Apache Mail Archive Pony Mail |
| netcat | netcat@netbeans.incubator.apache.org | Specifically for those involved in the NetBeans Community Acceptance Testing program. | Apache Mail Archive Pony Mail |
| dev | dev@netbeans.incubator.apache.org | Specifically for those committed to working on the development of Apache NetBeans itself, as well as those committed to promoting and documenting it, via events and tutorials, etc. | Apache Mail Archive Pony Mail |
| commits | commits@netbeans.incubator.apache.org | Receive GitHub commit messages whenever a commit is done. | Apache Mail Archive Pony Mail |
| notifications | notifications@netbeans.incubator.apache.org | Receive GitHub notifications whenever someone adds a comment to an issue and whenever a new pull request is opened or closed. | Apache Mail Archive Pony Mail |

Details

<https://www.apache.org/foundation/maillinglists#subscribe>

Subscribe

Send an e-mail to `<shortname>-subscribe@netbeans.incubator.apache.org`.

For example to subscribe to the `users` mailing list you would send an e-mail to `users-subscribe@netbeans.incubator.apache.org`.

Note: Subscription/unsubscription requests generate a confirmation mail to which you need to respond to confirm your subscription/unsubscription. Details – <https://www.apache.org/foundation/maillinglists#subscribe>

Unsubscribe

Send an e-mail to `<shortname>-unsubscribe@netbeans.incubator.apache.org`.

For example, to unsubscribe from the `users` mailing list you would send an e-mail to `users-unsubscribe@netbeans.incubator.apache.org`.

Please, do not send unsubscribe messages directly to the list itself.

By far the most common unsubscription problem is attempting to unsubscribe from an address that is not subscribed, perhaps because it is different to the one originally subscribed. If you're not sure which of your email addresses is subscribed, you can find out by examining the headers of a list message.

Note: Subscription/unsubscription requests generate a confirmation mail to which you need to respond to confirm your subscription/unsubscription. Details – <https://www.apache.org/foundation/maillinglists#subscribe>

Digest Subscriptions

The mailing lists can also be subscribed to in digest form, so that you at most receive one e-mail per day.

To subscribe in digest form, send e-mail to `<shortname>-digest-subscribe@netbeans.incubator.apache.org`, e.g. to `users-digest-subscribe@netbeans.incubator.apache.org`. Similarly, if you want to unsubscribe from the daily digest, you would send an e-mail to `<shortname>-digest-unsubscribe@netbeans.incubator.apache.org`.

Technology

In general, mailing lists for Apache projects - and Apache NetBeans is no exception - are managed by [ezmlm](#).
