

Writing integration and system tests

- [Introduction](#)
 - [Running the tests](#)

Introduction

The integration and system tests' source files are contained in *bigtop/bigtop-tests/test-artifacts*. The tests use the [JUnit](#) testing framework and are written in Java or Groovy.

Inside *bigtop/bigtop-tests/test-artifacts*, users can build the test jars. For example, if a user wants to build the hadoop test jars and store them in the local maven repository, the user can do the following:

```
| user@host:~/bigtop/bigtop-tests/test-artifacts/hadoop$ mvn install -DskipTests
```

Test resources, such as data and scripts, are located in *bigtop/bigtop-tests/test-artifacts/<project-name>/src/main/resources*.

bigtop/bigtop-test-framework contains utilities to perform test execution as well as utilities that help in writing tests, such as a wrapper to run shell commands.

Running the tests

Running integration, system, and package tests
