

Incubator Status Report (October 2007)

Report copied to <http://wiki.apache.org/incubator/October2007>

Sling is a framework to develop content centric web applications based on the idea of modularizing the rendering of HTTP resources.

Sling entered incubation on September 5th, 2007.

Community

- Proper wiki/web page created by Felix Meschberger based on the Apache Felix setup by Marcel Offermans and Ronald Spierenburg.
- Juan's committer account has been setup
- Apache Sling will be present at the ApacheCon US 07 with a Feather Talk.
- Upcoming will be a discussion on when we should cut a first release.

Software

- Discussion is taking place to simplify the current "Component API" and to remove interfaces which are more or less duplicate to the Servlet API used and extended by Sling.
- A "sample" project has been added to show some features of Sling.

Issues before graduation

- Make an incubating Sling release
- Grow a more diverse community (so far only commits from Day employees)

Licensing and other issues

- none
