

# Index

[Apache Pig](#) is a platform for analyzing large data sets. Pig's language, Pig Latin, lets you specify a sequence of data transformations such as merging data sets, filtering them, and applying functions to records or groups of records. Pig comes with many built-in functions but you can also create your own user-defined functions to do special-purpose processing.

Pig Latin programs run in a distributed fashion on a cluster (programs are compiled into Map/Reduce jobs and executed using Hadoop). For quick prototyping, Pig Latin programs can also run in "local mode" without a cluster (all processing takes place in a single local JVM).

Do you Pig? At Yahoo! 40% of all Hadoop jobs are run with Pig. Come join us!
