

# Apache ActiveMQ Board Report - 2009.04 (April)

## Status report for the Apache ActiveMQ Project

### Community:

- \* The ActiveMQ project has had another very busy but quiet quarter.
- \* The development and user lists continue to stay vibrant.
- \* The Camel sub project has completed moving to a TLP.

### Development:

- \* ActiveMQ 5.3.x development is underway. Several new ideas are being researched like a new storage implementation and a protocol buffer based wire encoding. If accepted into the main line this may bump up the major version to 6.0.
- \* ActiveMQ-CPP 3.0 development is underway. The current architecture is being refactored to improve performance and to allow for new features to be added more easily such as a Failover Transport.

### Releases:

- \* ActiveMQ-CPP 2.2.4
- \* ActiveMQ-CPP 2.2.5
