

GitBox upgrade list

Things to do on gitbox:

- Upgrade GitBox VM specs (8 cores, 200GB disk space on x1 - nvme?)
- Address  **INFRA-17120** - GitHub/Gitbox creates non-unique Message-Ids WAITING FOR USER
- Copy over all git repo configs to archiver.yaml and puppetize the results (put yaml in SVN!!)
- Have multimap.py use archiver.yaml for commit email destinations
- Tweak gitbox' repo setup to modify archiver.yaml and commit it
- Optionally have svngit2jira use archiver.yaml?
