

Status Report - November 2016

DESCRIPTION

Apache Flume is a distributed, reliable, and available system for efficiently collecting, aggregating, and moving large amounts of log data to scalable data storage systems such as Apache Hadoop's HDFS.

RELEASES

* The last release of Flume was version 1.7.0, released on October 16, 2016.

* No other releases are planned at this time.

CURRENT ACTIVITY:

* Project activity has picked up over the past few months, and a number of new contributors are active contributing code, reviews and responding to user and developer queries on mailing lists.

* A total of 52 issues have been filed, and 40 issues have been resolved between the period starting August 8, 2016 and November 6, 2016.

* Approximately 978 messages were exchanged on the dev list in the past three months, while a total of 52 were exchanged on the user list in this period.

COMMUNITY

* Two new committers, Balazs Donat Bessenyei and Jeff Holoman were elected to the project on September 21, 2016.

* The last time a new PMC member was elected for the project was on November 4, 2014.

* Currently there are:

- Total of 292 subscribers to the developer list
- Total of 687 subscribers to the user list
- Total of 28 committers
- Total of 21 PMC members

ISSUES

* There are no issues requiring board attention at this time.
