

App Server Deployment

App Server Deployment

Deploy Sling to a Tomcat 6.x installation can be done by following these steps:

1. Get the sling source as described here [here](#)
2. Build sling as described [here](#)
3. Make sure Tomcat isn't running
4. Copy the file `<sling>/launchpad/builder/target/org.apache.sling.launchpad-6-SNAPSHOT.war` to the `<tomcat>/webapps/` directory.
5. Rename `org.apache.sling.launchpad-6-SNAPSHOT.war` in `<tomcat>/webapps/` to `sling.war`
6. Start Tomcat
7. You should now be able to access Sling at <http://localhost:8080/sling>

Deploying Sling to a GlassFish 3.x can be done by following these steps:

1. Get the sling source as described here [here](#)
2. Build sling as described [here](#)
3. Copy `<sling>/launchpad/builder/target/org.apache.sling.launchpad-6-SNAPSHOT.war` to a temporary directory and rename the file to `sling.war`
4. Deploy Sling to GlassFish with `<glassfishv3>/bin/asadmin deploy <path to temporary directory>/sling.war`
5. You should now be able to access Sling at <http://localhost:8080/sling>
