

Make Sling shiny

SLING-6666

Users should be able to run pure Sling in production with good experience (compare to django CMS or Drupal) for small to enterprise size websites or applications. Besides Sling itself it means improving documentation and Sling's website (not only content but appearance also) to attract more users and bring it out of the shadows.

Ideas

- improve Sling's website (UX, SEO, ...)
- improve documentation (website, modules, handbook, compile a module catalog...)
- organize regular hackathons
- improve OOTB experience
- move outdated modules to attic
- list related projects/projects using Sling
- make Sling's news more interesting (not just a list of new releases)
- provide a roadmap
- bug smashing
- ...
