

How To Update Oozie site

The Oozie site, <http://oozie.apache.org/>, is built using Maven site plugin.

The source for the site is in the following SVN branch <https://svn.apache.org/repos/asf/oozie/site/trunk> (for committers) and <http://svn.apache.org/repos/asf/oozie/site/trunk> (for non-committers).

Check out the site branch.

Make the necessary changes

Build the site 'mvn site' to verify it builds correctly.

Check the built site under 'target/site' has the desired changes.

If you are not a committer or if changes are significant please open a JIRA and attach the patch for a committer to review (go to the [Oozie JIRA](#), and select **site** as component of the JIRA issue).

The following steps must be done by a committer:

- Commit the changes.
- Wait until the site is built in staging, <http://ci.apache.org/builders/oozie-site-staging> (it should be built within 5 mins of the commit)
- Once you see that the staging built was successful you need to publish the site, <https://cms.apache.org/oozie/publish>
