Installing prerequisite software

Apache Geronimo v2.2 is built on Java SE v1.6 using Maven 2. You can get the appropriate version of Java Virtual Machine (JVM) from the following Web sites:

- J2SE SDK (<http://java.sun.com/>)
- Apache Maven (<http://maven.apache.org/>) *only needed if building from source.*

Note: Ensure that the <java_home>/bin directory is added to the **PATH** system variable and both the **JAVA_HOME** and **JRE_HOME** system variables are defined after installing JVM.
