

Build-Dev-Plan

Import code

- fetch all cws : <http://svn.apache.org/viewvc/incubator/ooo/trunk/tools/dev/fetch-all-cws.sh?view=log>
- migrate to svn : [svn import experience](#) so far

Build

Ensure building works:

- For each relevant platform (likely a subset of Linux x86 aka `unxlngi6`, Linux x86_64 aka `unxlngx6`, Mac OS X x86 aka `unxmacxi`, Solaris x86 aka `unxsoli4`, Solaris SPARC 32-bit aka `unxsols4`, Windows x86 aka `wntmsci12`), more-or-less precisely state a build environment (compiler tool chain, external headers and libraries, etc.) and a (preferably short) list of `configure` arguments that lead to a successful build.

Test

Ensure "developer tests" (intended to be executed at build-time) work:

- Ensure the smoke test works by issuing the `build --all` command from module `smoketestoo_native`.
- Ensure the subsequent tests (see http://wiki.services.openoffice.org/wiki/Test_Cleanup#subsequenttests) work by issuing command `subsequent tests` (there might be spurious failures, see http://wiki.services.openoffice.org/wiki/Test_Cleanup#unoapi_Tests_2; in such cases, repeated calls of `subsequenttests` should eventually succeed).
- Ensure that there are no regressions in the warning-free-ness of the code via `configure --enable-werror`.

Ip clearance

- list of incompatible : TODO : link to file in svn
