

# Initial Module Cleanup, 2016 - moving "dormant" Sling modules to /attic

Status: solved with  [SLING-6264](#) - Bulk move of modules to attic - November 2016

We have a lot of modules, especially in the contrib area which haven't been touched for years. Some are prototypes, some are outdated or not relevant anymore.

This site is a collection of modules to be proposed to be moved to the /attic folder of our codebase at <https://svn.apache.org/repos/asf/sling/attic/>

Moving to the attic does not imply any comment on the quality or usefulness of such modules. Modules that move to attic can also come back if needed, it's not necessarily forever.

## Candidate modules from /contrib
