

Sentry Incubator Status Report December 2013

Sentry

Sentry is a highly modular system for providing fine grained role based authorization to both data and metadata stored on an Apache Hadoop cluster.

Sentry has been incubating since 2013-08-08.

Three most important issues to address in the move towards graduation:

1. Build community and add new committers
2. Continue to release at regular intervals

Any issues that the Incubator PMC (IPMC) or ASF Board wish/need to be aware of?

None

How has the community developed since the last report?

Community development continues. Sentry held its first key signing meetup for committers. A number of committers participated.

How has the project developed since the last report?

A number of new JIRAs have been filed and are being actively worked on. Support for Solr index level authorization is complete and available on trunk. A new test framework to run hive integration tests on a real cluster is available as well.

Date of last release:

2013-09-25

When were the last committers or PMC members elected?

Last committers and PMC members were elected when the project entered incubation.
