VERIFYING RELEASES

When downloading from a mirror it is recommended to verify the integrity of the downloads. This should preferably be done by verifying the OpenPGP compatible signature available from the main Apache site. The KEYS file contains the public keys used for signing the release. It is recommended that a web of trust is used to confirm the identity of these keys.

You can check the OpenPGP signature with GnuPG via:

```
gpg --import KEYS
gpg --verify apache-cxf-*.tar.gz.asc
```

It is also possible to verify the integrity of the downloads using the SHA1 checksum with:

```
shasum --check apache-cxf-*.tar.gz.shal
```

Previous releases

Previous releases are all archived in the apache archive:

Incubator releases: <http://archive.apache.org/dist/cxf/>
Maven Repositories
Incubator releases: <http://archive.apache.org/dist/incubator/cxf/>

If you use Maven for building your applications, all supported CXF releases are synced into the maven central repository: <http://repo1.maven.org/maven2/>

For information on where to retrieve Apache CXF SNAPSHOT maven artifacts, please refer to the page on [building CXF](#).
