

# Unrelated but Interesting Projects by the Click Community

Unrelated to **Apache Click**, but still some interesting and very useful open source projects created by the Click Community.

## 1. **Mirage**

A small and efficient DB access library for projects where an ORM would be an overkill (*it's also an efficient alternative to [DbUtils](#)*). There's also a [small example web application with Mirage and Click](#).

## 2. **AmaterasUML**

Eclipse UML plug-in, with support for Class, Sequence, Activity and Use Case Diagrams, with a very interesting API that allows scripting and generating of diagrams from code (see the Scripting API section).

## 3. **AmaterasERD**

Eclipse plug-in for simple and quick ERD modeling of databases.
