

# Current Roster of OpenOffice Domains

## List of Domains to Transfer

This is not a list of subdomains of openoffice.org. It is a list of the domains whose ownership is transferred to the ASF from Oracle.

### Open Todo's:

- Communicate with openoffice.org.il regarding their OOo website.
- Decide what we want to continue.
- Have Apache Infrastructure transfer the continued domain registrations to the ASF and set the authoritative DNS servers to point consistently. We may need to transfer everything and then drop what we don't want.
- Discuss subdomain rewrite rules for openoffice.org with infrastructure.
- Decide which domain names we want to have for the developer part (openoffice.apache.org) and for the user part (\*.openoffice.org). (Dave thinks we can defer this for awhile.)

Note that while are incubating we are: incubator.apache.org/openofficeorg/ and when TLP we prefer to be openoffice.apache.org.

Rewrite rule for download.openoffice.org to the current test location in our podling would be incubator.apache.org/openofficeorg/download

Note that \*.services.openoffice.org will require special handling vs. \*.openoffice.org
