

# Migration from Kenai to Apache

## Introduction

The migration of the OpenOffice.org web infrastructure to the Apache infrastructure will be a big challenge. To have an overview and to evaluate problems I set up this page. I propose to make a document like <http://kenai.com/projects/ooo-migration>. The idea is to map all tools and services hosted by OpenOffice.org, to evaluate problems, to search solutions, and finally make a migration plan.
