

Roles Interceptor

This interceptor ensures that the action will only be executed if the user has the correct role.

Parameters

- `allowedRoles` - a comma-separated list of roles to allow
- `disallowedRoles` - a comma-separated list of roles to disallow

When both `allowedRoles` and `disallowedRoles` are configured, then `disallowedRoles` takes precedence, applying the following logic: `(if ((inRole(role1) || inRole(role2) || ... inRole(roleN)) && !inRole(roleA) && !inRole(roleB) && ... !inRole(roleZ)) { //permit ...`

Examples

Error rendering macro 'code': Invalid value specified for parameter 'java.lang.NullPointerException'

```
<!-- only allows the admin and member roles -->
<action name="someAction" class="com.examples.SomeAction">
  <interceptor-ref name="completeStack"/>
  <interceptor-ref name="roles">
    <param name="allowedRoles">admin,member</param>
  </interceptor-ref>
  <result name="success">good_result.ftl</result>
</action>
```
