

GSoC 2016

Project List

Apache Tajo is a data warehouse system for Hadoop. Tajo is designed for low-latency and scalable ad-hoc queries, online aggregation and ETL on large-data sets by leveraging advanced database techniques. Tajo has gained much attention as one of the SQL-on-Hadoop projects. Tajo is production-ready, and used in various fields for deep data analysis.

We are looking for competent students who want to participate in Apache Tajo project via GSoC 2016. It would be a great opportunity for you.

Support Kudu

- <https://issues.apache.org/jira/browse/TAJO-2046>

Support MongoDB

- <https://issues.apache.org/jira/browse/TAJO-2079>

How to Apply

Please read [GSoC guide for student](#) to apply. It is highly recommend to discuss your interest before you apply. The best way to discuss is to comment on individual Jira or send mail to dev list.
