

Installation of Apache NetBeans

You can install NetBeans IDE in different ways:

- Via an installer (coming soon).
- Extracting from a ZIP produced by Jenkins: builds.apache.org/job/netbeans-linux
- Building from sources: <https://github.com/apache/netbeans> (see the README).

Note: NetBeans IDE runs on JDK 8 or JDK 9, as described here – <https://jaxenter.com/netbeans/using-apache-netbeans-incubating-jdk-9>
