

IRC Stats SOP

There is a supybot running on puppet.cloudstack.org.

This machine logs all of the conversations in #cloudstack on irc.freenode.net

There is then a cronjob that uploads those logs to <http://cloudstack.org/irc/>

We then use [piscg](#) to produce summary reports.

An example piscg configuration file that we use is as follows:

```
<channel="#cloudstack">
LogDir = "feb"
Format = "supy"
OutputFile = "CloudStack%t.html"
OutputTag = "-February"
DailyActivity = "31"
ColorScheme = "orange_grey"
Maintainer = "David Nalley"
Network = "Freenode"
</channel>

<set OutputTag="-Feb">
<set DailyActivity="29">
<set PicLocation="gfx/">
```
