

Flume NG Plugins

Flume NG Plugins

The plugins listed on this page are provided by their respective authors, not the Apache Flume project. In alphabetical order:

Cassandra

[flume-ng-cassandra-sink 1.0.0](#)

A Flume sink using Apache Cassandra. The Cassandra Sink will persist flume events to a Cassandra Cluster. (B. Todd Burruss)

Fluentd

[Fluent-plugin](#)

Flume input/output plugin for Fluent (Muga Nishizawa)

MessagePack

[flume-ng-msgpack-source 0.0.1](#)

Flume NG MessagePack source. The source was implemented by MessagePack-RPC. (Leon Lee)

MongoDB

[flume-ng-mongodb-sink 0.0.1](#)

Flume NG MongoDB sink. The source was implemented to populate JSON into MongoDB. (Leon Lee)

Phoenix - HBase

The Apache Phoenix project now provides a custom sink for streaming Flume events into HBase. These events may be queried through SQL using the Phoenix JDBC driver.

The detailed instructions can be found [here](#) (still on github until we move to Apache):
