

Running Geronimo

 [Installing prerequisite software](#)

 [Installing and running](#)

[Starting and stopping the server](#) 

- [Running Geronimo as a non-root user](#) — It is very likely that you will not want to have the Geronimo server process under the super user root. The following are a series of simple steps for changing the ownership and permissions for the required files in order to run Geronimo with a different user.
- [Running Geronimo as a service](#) — This section will show you how to run Geronimo as a service on Windows and Linux platforms.
- [Running Multiple Geronimo Instances](#) — It is possible to run multiple instances of geronimo on the same machine.
