

Web Samples

There are a few example programs demonstrating the [REST](#), [Ajax](#) and [WebSockets](#) messaging that comes with the ActiveMQ distribution.

Up until version 5.8 web demos were included in the default configuration and could be accessed directly using <http://localhost:8161/demo> url after starting the broker.

From 5.8 onwards, demos are excluded from default configuration. To start a broker with web examples, use `activemq-demo.xml` configuration file, like

```
bin/activemq console xbean:examples/conf/activemq-demo.xml
```
