

How can I iterate over a range, like with JSTL's forEach tag?

One solution is to just use the `c:forEach` tag. If you are on an older servlet container which doesn't make JSTL available by default and don't want to add it as an additional dependency, though, it is possible to do this with Struts' `s:iterator` tag and an OGNL generator expression:

```
<s:iterator value="(10).{ #this }"><s:property/></s:iterator>
```
