

Can I change templateSuffix on a per-page basis

The `templateSuffix` variable controls which templating engine is used to render a page. To change the engine for a particular page, change the value of the `templateSuffix` variable.

Change to the Velocity Engine

```
<s:set name="templateSuffix" value="'vm'" />
```

Change to the JSP engine

```
<s:set name="templateSuffix" value="'jsp'" />
```

Change to the FreeMarker engine

★ *Freemarker is the default templating engine*

```
<s:set name="templateSuffix" value="'ftk'" />
```
