

ReleaseNote54

14 December 2015, Apache Lucene™ 5.4.0 available

The Lucene PMC is pleased to announce the release of Apache Lucene 5.4.0

Apache Lucene is a high-performance, full-featured text search engine library written entirely in Java. It is a technology suitable for nearly any application that requires full-text search, especially cross-platform.

This release contains numerous bug fixes, optimizations, and improvements, some of which are highlighted below. The release is available for immediate download at:

<http://lucene.apache.org/core/mirrors-core-latest-redir.html>

Please read CHANGES.txt for a full list of new features and changes:

https://lucene.apache.org/core/5_4_0/changes/Changes.html

Lucene 5.4.0 Release Highlights:

API Changes

- * `Query.getBoost` and `Query.setBoost` are deprecated in favour of the new `BoostQuery`
- * The `Filter` class is deprecated in favour of `FILTER` clauses in a `BooleanQuery`
- * `DefaultSimilarity` has been renamed to `ClassicSimilarity` to prepare for the move to BM25 in Lucene 6

New features

- * New Serbian token filter
- * New `DecimalDigitFilter`, to fold unicode digits to latin digits
- * New `UnicodeWhitespaceTokenizer`, that uses Unicode's whitespace definition and splits on NBSP
- * New `GeoPointDistanceRangeQuery` to search for geo-points within a ring
- * Query caching is now enabled by default in `IndexSearcher`, use `IndexSearcher.setQueryCache(null)` to disable

Optimizations

- * `MatchAllDocsQuery` got faster
- * Doc values now use less memory for multi-valued fields and less disk in case of sparse fields
- * Two-phase iterators got a match cost API so that the costly bits can be checked last

Bug fixes

- * `PatternTokenizer` no longer hangs onto heap sized to the maximum input string it's ever seen.

Further details of changes are available in the change log available at:

http://lucene.apache.org/core/5_4_0/changes/Changes.html

Please report any feedback to the mailing lists
