Welcome to the Infrastructure Confluence Wiki!

If you can't find the information you want listed in the Topical Index, below, you can browse the Navigation Menu to the left or use the search field above, specifying the Infrastructure space.

If you have suggestions, or would like to contribute to this wiki, get in touch with the Infrastructure Team.

This wiki is an essential resource for the Infra team, and a secondary resource for PMCs and committers.

- For introductory information, visit the dev area of the ASF website.
- For access to information and services that Apache project PMCs and committers need, visit the Infra site.

Contents

- Infra project management
  - Infra monitoring and incident response
- Infra Policies
- Services
  - ASF accounts
  - Backups
  - Bug tracking
  - CI/CD
    - Buildbot
    - Docker
    - Jenkins
  - Confluence wiki
  - Content distribution
  - DNS
  - Email
  - Jira
  - Slack
  - LDAP
  - Localization
  - Puppet
  - Security
    - Certificates
    - Version control
      - git
      - svn
      - nexus
  - Website tools
    - Machines and VMs
    - Machines
    - Virtual machines
  - Processes
    - Account processes
    - Project processes
    - Package processes
- Other
- Archived pages

Draft pages, not yet complete

- Building and deploying web sites with PyPubSub, Jenkins, and Buildbot
- Service Priorities
- The history of Infra

On-call and pager duty

Content by label

There is no content with the specified labels

Infra project management

- Infra TODO...Wish...Work List
- Puppet 3 to Puppet 6 Migration
Infra monitoring and incident response

Content by label

Infra Policies

- Service Priorities

Services

ASF accounts

- ASF LDAP and Account Policies

Backups

Content by label
There is no content with the specified labels

Bug tracking

- Bugzilla Management
- Infra release process
- Jira
- Jira - creating a private project
- Jira Plugin Upgrades
- Jira testing on issues-test.apache.org
- Jira Upgrades
- Jira user account management
- Merging JIRAs
- Role Based JIRA Authorization

CI/CD

Buildbot

- Ant Installation Matrix - Buildbot
- ASF Buildbot Configuration update workflow
- Build nodes - node name to hostname mappings
- Buildbot
- Buildbot Windows Node
- JDK Installation Matrix - Buildbot
- Maven Installation Matrix - Buildbot
- rat-output and other rat nonsense
- Upgrading Buildbot

Docker

Content by label
Jenkins

- Ant Installation Matrix
- Build nodes - node name to hostname mappings
- ci-beam.apache.org
- ci-builds.apache.org
- ci-cassandra.apache.org
- ci-couchdb.apache.org
- ci-hadoop.apache.org
- ci-infra.apache.org
- Disk Space cleanup of Jenkins nodes
- GitHub repo: status and public_repo tokens
- Gradle Installations
- JDK Installation Matrix
- Jenkins
- Jenkins job authorization
- Jenkins Plugin Upgrades
- Jenkins Upgrades
- jenkins-ccos.apache.org
- Kicking off a Jenkins build with a GitHub PR
- Maven Installation Matrix
- Multibranch Pipeline recipes
- Using the ASF Jenkins API

Confluence wiki

- Confluence Plugin Upgrades
- Confluence Upgrades
- Confluence User Macros
- Confluence wiki
- Giving a user edit access to Confluence
- Labels and index arrangement
- Managing permissions on your project's Confluence Space

Content distribution

- Artifactory
- Digicert usage statistics
- Distribution via the Apple App Store
- Google code signing service - requesting access
- Google Play
- Updating SSL Certs for packages.apache.org

DNS

Content by label
Email

- Email - Apmail and ezmlm management
- Email Services
- Mail flow
- mboxer
- PonEE Work Request Consolidation
- Qmail Renames
- Removing an email from the archives

Jira

- Infra release process
- Jira
- Jira - creating a private project
- Jira Plugin Upgrades
- Jira testing on issues-test.apache.org
- Jira Upgrades
- Jira user account management
- Merging JIRAs
- Role Based JIRA Authorization

Slack

- Slack Guest Invites

LDAP

Content by label

There is no content with the specified labels

Localization

- Localization - Apache Tomcat's process using POEditor
- Localization - Pootle permissions levels

Puppet

- Puppet 3 to Puppet 6 Migration
- Using Pipservices with Puppet6

Security

- Adhoc Automation
Certificates

Version control

**git**

- Batch changing default branch for multiple repos
- Creating a new repository
- Git - .asf.yaml features
- Git repos are out of sync
- Git, GitHub and Gitbox
- Github Actions to DockerHub
- GitHub Pages
- GitHub repo: status and public_repo tokens
- Github Secrets and Tokens
- GitHub webhook relay service
- Publish a huge project website without checking it into Git

**svn**

- Creating a new repository
- Subversion - test a new master
- Subversion Administration
- Subversion basics

**nexus**

Archived pages

- Apache and GitHub
- Application upgrades policy and workflow
- ASF Mail Rejection Policy
- Buildbot Migration Install Notes
- Code signing
Use labels for everything

This page builds the index based on the labels on pages, and then alphabetically by title within each section. Label any page that you want to appear in the index by clicking the label icon beside the page title. Type 'infra-$service' in the search field and select the label that fits best. If there is no appropriate label, you can create one. If you do that, though, you need to add a section for that label to the index.
Review the existing labels here https://cwiki.apache.org/confluence/labels/listlabels-alphaview.action
