

AntExternalTaskdefs

The intent of this page is to list and briefly describe third-party Ant taskdefs.

This page lists external resources for Apache Ant. This page is meant to complement <http://ant.apache.org/external.html>, and allows to self-announce your antlibs, tasks, or extensions with the Ant community without requiring an Ant committer to check in your patch to `xdocs/external.xml` (.html).

Note that **nothing listed here is directly supported by the Ant committers** (therefore *external* tools and tasks), and if you encounter any problems with them, please use the contact information.

URL	Description
http://svgsalamander.java.net	Convert SVG documents to PNG, JPG, and other image formats.
http://ebourg.github.com/flamingo-svg-transcoder	Task to transform SVG images into Java2D icons with no external dependencies.
http://sourceforge.net/projects/jtaskdefs	Taskdefs for VC6, VC7, VB6 and others.
http://jtools.org/ant-classloadertask	External taskdefs for class loader handling.
http://www.dokutransdata.de/ant_latex	Simple task to use (PDF) LaTeX , BibTeX , Makeindex and GlossTeX
http://www.dokutransdata.de/ant_nsd2ltx	Task to convert Nassi-Shneiderman-Diagrams (XML) to LaTeX
