

Home Subpage

In addition, Tuscany is integrated with various technologies and offers:

- a wide range of bindings (pluggable protocols)
- various component types including and not limited to Java, C++, BPEL, Spring and scripting
- an end to end service and data solution which includes support for Jaxb and SDO
- a lightweight runtime that works standalone or with other application servers
- a modular architecture that makes it easy to integrate with different technologies and to extend
- Integration with web20 technologies

Apache Tuscany SCA is implemented in [Java](#) and [C++ \(referred to as Native\)](#) . [Learn more about SCA](#)

Please join us to create a practical SOA infrastructure that addresses the challenges which small to large scale businesses face.
