

RewriteStatsBroken

Making /stats accessible

Some 3rd party apps like Typo, [WordPress](#), and Drupal will take over the directory .htaccess file where they are installed to provide nice and clean urls but doing so can break your /stats and other aliased requests.

The problem occurs because mod_rewrite is used to redirect all requests for non-existing files to the default file the CMS or program uses. A lot of hosting providers will install a stats package like Awstats for you, but instead of installing into your site directory they create a link or redirect.

Some examples follow, substitute stats for your situation. These examples all assume that they are in the .htaccess file created by your 3rd party app.

For Drupal

[Drupal Home](#)

```
# Rewrite URLs of the form 'index.php?q=x':
RewriteCond %{REQUEST_FILENAME} !-f
RewriteCond %{REQUEST_FILENAME} !-d
RewriteCond %{REQUEST_URI} !^/stats [NC]
RewriteRule ^(.*)$ /index.php?q=$1 [L,QSA]
```

For Mambo

[Mambo Home](#)

```
RewriteCond %{REQUEST_FILENAME} !-f
RewriteCond %{REQUEST_FILENAME} !-d
RewriteCond %{REQUEST_URI} !^/stats [NC]
RewriteRule . /index.php [L]
```

For [WordPress](#)

[WordPress Home](#)

```
RewriteCond %{REQUEST_URI} ^/stats [NC]
